6. PV INSTALLATION REQUIREMENT

Certification requires that you install at least two PV installation projects at some point in the two years prior to submitting an application for the exam totaling 1 kW. At least one installation must be a system with an **inverter** and subject to a complete electrical permitting and inspection process by a permitting authority – OR, in the absence of such, an appropriate underwriter authorized to provide an inspection certificate. In regions where neither of these inspection options exist, the Application Review Committee will judge experience based on supplied documentation.

NABCEP reserves the right to contact system owners/operators, permitting authorities, and responsible contractors to verify work listed in this section. Attach copies of any permits or inspection certificates acquired. Optional: attach a photo of the system, attach letters from customers, design plans, a letter from your employer asserting that you performed the work listed, or other documentation. If a license for solar installation is required in the jurisdiction in which the work is performed, candidates must submit their license number -- or the license number under which the work was performed.

The *Candidate Information Handbook* Section 3.4 has additional information on documenting the PV installation requirement.
