FACILITY/INSTITUTION	PV COURSES	SH COURSES
ALABAMA – Auburn **Smart North America** 570 Devall Drive Suite 303 Auburn, AL 36832 **Contact:** Ruth Page-Nelson **Email:** sgna@smartgridnorthamerica.com **Phone:** (800) 764-3085 **Website:** smartgridnorthamerica.com	**Solar Photovoltaics** This course will provide 40 hours of training covering the NABCEP required learning objectives in preparation for the Entry Level Exam. Participants will get hands-on and classroom training. Completion of this course will result in students who are prepared to enter the field and obtain further training and experience needed to become proficient installers.	**The Entry Level Objectives for Solar Water Heating** introduces students to the basics of water heating in homes, commercial buildings, pools, space heating and other applications through capturing the heat from the sun, storing and transferring it for designated applications .This course covers Learning Objectives required by NABCEP: 1. Conducting a site analysis , including load analysis 2. Identifying SH safety practices, standards, codes and certification 3. Identifying systems for specific climates and applications 4. Identifying proper orientation and installation methods 5. Identifying proper use of balance of system components and materials 6. Identifying common SH maintenance items The student will be prepared to take the NABCEP Solar Heating Entry Level Exam. Achieving a passing score on the entry level exam is an indication that the candidate has demonstrated a basic knowledge of the fundamental principles of the application, installation, design and operation of Solar Heating Systems.
ARIZONA – Mesa **Arizona State University** College of Technology & Innovation: The Collaboratory	**Photovoltaic System Design and Installation** The 40 hour course will provide an overview of the basic PV system design and application. The goal is

4303 E Brundage Lane Bakersfield, CA 93307 **Contact:** Anne Markward, Registrar **Email**: anne@solarseminars.org **Phone:** (970) 779-8796 **Website:** www.solarseminars.org	installer, PV 101teaches students how to safely and efficiently design, situate, and install a solar electric system. We teach PV 101 in two different formats: either a traditional 5-day, classroom and practice based environment, or a blended format that combines the best of on-line, interactive learning with two days (16 hours) of hands-on installation experience.	
CALIFORNIA – Blythe **Palo Verde College** One College Drive Blythe, CA 92225 **Contact:** George Walters, Associate Dean **Email**: george.walters@paloverde.edu **Phone: (**760) 921-5507	**Solar PV Theory and Applications** This course will examine the theoretical and technical dimensional of solar power systems, focusing on solar photovoltaic technologies. Students will learn how solar photovoltaic cells work and how they are made. The basic electrical theory and calculations of electrical capacity/requirements for photovoltaic systems will be reviewed. Topics will include materials and manufacturing, system components, codes, tools and safe work practices. PV system efficiency and payback potential will be analyzed to better understand its viability as an alternative energy source. The course will also provide an introduction to solar thermal systems.	
CALIFORNIA – Cotati **Sun Pirate, Inc** P.O. Box 187 Cotati, CA 94931 **Contact:** Roger Coghlan, President **Email**: ret-training@sunpirate.com **Phone: (**707) 792-6929 **Website:** www.sunpirate.com **ONLINE Option!**		**Entry Level Solar Heating Program (Online)** Sun Pirate's Entry Level Solar Heating Program consists of the completion of our IREC/ISPQ accredited, self-paced Solar Heating System Design & Installation Online Course (60 contact hours). The student has the option to add the Entry Level SH Program which includes the initial testing fee and administration of the NABCEP SH Entry Level Exam at a Computer Based Testing (CBT) center. The SHSDI online course concentrates on the basics of installing solar heating systems. Students will learn practical design criteria, installation guidelines, safety issues, maintenance, and legal

FACILITY/INSTITUTION	PV COURSES	SH COURSES
		considerations. This is a self-paced, instructor mentored online course. Primary Text *Solar Domestic Water Heating* by Chris Laughton is included. Our instructor Roger Coghlan is an ISPQ Certified Instructor.
CALIFORNIA – El Cajon **Cuyamaca College** Continuing Education & Workforce Training 900 Rancho San Diego Parkway El Cajon, CA 92019 **Contact**: Rita Shamoon **Phone**: (619) 660-4651 **Email**: Rita.Shamoon@gcccd.edu **Website:** www.cuyamaca.edu	**Solar PV Installation** This is an entry level, interactive course combining academic and hands on experience for a career in the solar electric "PV" industry. Beginning with the fundamentals of photovoltaic, solar radiation, site surveys, and system components, the student will learn the foundation and terms used in this field. Once the basic concepts are learned, each student has four, practical, hands on labs to apply skills which they have learned. Students will complete this course with the vocabulary and basic experience to expand their careers in the growing solar and renewable energy industry. This course results in OSHA 10 Hour Construction Safety Certification. Field trips may be required.	
CALIFORNIA – Eureka **College of the Redwoods** Dept.: Applied Technology 7351 Tompkins Hill Rd. Eureka, CA 95501 **Contact:** Julia Morrison **Email**: julia-morrison@redwoods.edu **Phone: (**707) 269-4005 **Website**: www.redwoods.edu	**CT 33 Introduction to Solar Photovoltaic Systems** A course designed to provide students with essential information and training to work with residential solar photovoltaic systems. Course content includes fundamentals of AC/DC, the National Electric Code, and principles of a residential solar photovoltaic systems. Upon successful completion of the course, students will be given the opportunity to take the NABCEP PV Entry Level Exam (North American Board for Certified Energy Practitioners, Inc.) Achievement of the NABCEP PV Entry Level Exam is a way for individuals to demonstrate that they have achieved a basic knowledge of the fundamental principles of the application, design, installation and operation of grid-tied and stand-alone PV Systems.	**Introduction to Solar Thermal Systems** A course designed to provide students with essential information to work with solar thermal systems including system design & sizing residential projects, system components, estimating installation costs & return on investments, system maintenance & building codes. Students will be given the opportunity to sit for the NABCEP Entry Level Exam at the conclusion of the course.

CALIFORNIA – Hopland **The Solar Living Institute** 13771 S. Highway 101 Hopland, CA 95449 **Contact:** Karen Kallen, Managing Director **Email:** karen.kallen@solarliving.org **Phone:** (707) 472-2456 **Website**: www.solarliving.org/ **ONLINE Option**	**PV 200: PV Design and Installation Intensive**. This dynamic course is an excellent five day intensive workshop that will immerse you in the ever-expanding PV market. This course will prepare you for the NABCEP entry level exam and give you practical hands-on labs to fully understand PV systems. The course covers both on and off grid PV with an emphasis on grid tied residential systems. We take care to cover every aspect of PV design installation; energy efficiency, safety, electricity basics, PV Modules, new PV Technology, Inverters, Mounting Systems, Components (BOS) and Sizing, PV Electrical and Mechanical design, Performance Analysis and Troubleshooting, and Economics of PV. This course is particularly good for those seeking employment in the PV field, but will give the homeowner a great education in PV fundamentals.	
CALIFORNIA – Imperial **Imperial Valley College** 380 East Aten Road Imperial, CA 92251-0158 **Contact:** John Fahim **Email:** john.fahim@imperial.edu **TelePhone:**760-336-1310 **Website**: www.imperial.edu	**IVC Solar PV & Thermal Technician Certificate** This IVC Solar Photovoltaic & Thermal Technician Certificate program has two components and will provide students with adequate knowledge, in class and hands-on, for photovoltaic electrical systems (PV) and solar heating (SH) of water and space systems, which meets the North American Board of Certified Energy Practitioners (NABCEP) standards and learning objectives, including the following courses: Electrical Principles - Electrical Wiring and Protection - Alternative Energies - Solar PV Energy Systems - Solar PV Electrical Systems - Solar Heating - NABCEP Entry Level Exam Preparation - OSHA 30 Hrs card - Internship & Employment Readiness.

CALIFORNIA – Livermore **Solar Universe, Inc.** Solar University, Training Division 1152 Stealth Street Livermore, CA 94551 **Contact**: Michael Hynes, VP of Training and Development **Email:** mhynes@solaruniverse.com **Phone:** (925) 455-4700 **Websites**: www.solaruniverse.com www.sunprotraining.com	**SunPro Tech Solar PV Installer Training** Solar University's SunPro Tech Solar PV Installer training course was designed by trade professionals to turn beginners into solar professionals in a fast and effective learning environment. The intensive immersion style training program is taught in a fully equipped solar installation vocational training facility with hands-on exercises exactly as they are experienced in the field. The SunPro course was designed with the premise that the best way to learn is by doing. During the 5-day SunPro training sessions, students work with experienced instructors to build and operated five different solar power systems. Class sizes are limited to a maximum of 20 students to guarantee the optimum instructor to student ratio throughout the hands-on exercises. The SunPro training session consists of approximately 40% classroom lecture and 60% hands-on field lab work.	
CALIFORNIA – Los Angeles **Abram Friedman Occupational Center** 1646 South Olive Street Los Angeles, CA 90015 **Contact:** Jay Wehbe, Instructor **Email:** jmwehbe1@yahoo.com **Phone:** (213) 765-2400 x2505 **Website**: www.afoc.edu	**Photovoltaic 1** This competency based course in solar electricity introduces students to the field of photovoltaics (PV). Students will receive instruction in solar electrical theory, PV safety, related vocabulary and terminology, types of PV systems, basic load analysis, system sizing, metering laws, and employment opportunities in the industry. The course provides a comprehensive review of the NABCEP learning objectives in order to prepare students for the NABCEP PV Entry Level Exam.	
CALIFORNIA – Los Angeles **Coast Career Institute, Inc.** 1345 South Hill Street Los Angeles, CA 90015 **Contact:** Sherry Pruett	**Solar Installation Training:** Our program prepares students for an entry level position for installation of Photovoltaics systems. The course covers core material for photovoltaic principles, system wiring, mounting, system installation, maintenance and

CALIFORNIA – Los Angeles **East Los Angeles Skills Center** Los Angeles Unified School District 3921 Selig Place Los Angeles, CA 90031 **Contact:** Brian Hurd, Bob Bower **Email:** bhhurd@sbcglobal.net **Phone:** (323) 224-5970	**Photovoltaic Installer: Entry Level Exam Preparation:** Participants will receive instruction in solar electrical theory, PV safety, related vocabulary and terminology, types of PV systems, basic load analysis, system sizing, components and hardware, code issues, rebates and incentives, basic cost estimating, net metering laws and employment opportunities in the industry.	
CALIFORNIA – Los Angeles **Los Angeles Trade Technical College** 400 West Washington Blvd. Los Angeles, CA 90015 **Contact:** Dave Robinson, William Elarton **Email:** cdm@lattc.edu **Phone:** (213) 763-3700 **Website**: college.lattc.edu/nabcep	**ECONMT 105: Fundamentals of Solar Electricity** Traditional classroom lecture with demonstrations **ECONMT110: Renewable Energy Systems** Traditional classroom lecture with demonstrations **ECONMT205: Solar Energy Installation & Maintenance** Hands-on lab where students will install and troubleshoot operational systems	
CALIFORNIA – Los Angeles **New Technology Training Center** 2965 Glendale Blvd Los Angeles, CA 90039 **Contact:** Maro Samkian, Director **Email:** info@nttisite.com **Phone:** (818) 247-0989 **Website**: www.newtechtrain.com	**Alternative Energy Practitioner** (100 hour program with traditional classroom lecture plus hands-on exercises). This program is designed to provide a rigorous foundation of knowledge and skills for entry level PV installers. It covers basic mathematics and electrical circuit theory; solar fundamentals, PV components, and PV system design and performance simulation. We will make use of on-line tools to aid electrical and mechanical system design and system simulation. PV system design will include mechanical and electrical issues. There will be a section on NEC-compliant design including wire ampacity, grounding, component listing, interconnection and labeling; and a section on how to work with tools and OSHA workplace safety. The program will be organized around four critical tasks: (1) Sizing

	Systems to meet customer objectives, (2) the Site Survey, (3) Detailed System Design and Simulation, and (4) System Installation and Troubleshooting.	
CALIFORNIA – Modesto **Modesto Junior College** Technical Education Department 435 College Ave Modesto, CA, 95350 **Contact:** Andrian DeAngelis, **Email:** deangelisa@mjc.edu **Phone:** (209) 575-6088 **Website**: www.mjc.edu	**ELTEC 321: Photovoltaic Systems:** The study of PV systems: off-grid, interconnected and hybrid. The course includes the study of PV systems, positioning, electrical and mechanical design and integration (including hands-on experiences), working safely with PV systems, financial topics (system estimate and rebates) and an overview of NABCEP certification requirements.	
CALIFORNIA – Murrieta **Ambassador Energy, Inc.** 41120 Elm Street, Ste 105 Murrieta, CA 92562 **Contact:** Steve Fulgham **Email**: info@ambassadorenergy.com **Phone:** (866) 586-1840 **Website**: www.mjc.edu	**Entry Level Solar PV Design and Installation:** This course is an introduction to PV components, system design, industry codes and standards for PV system, and unique design problems and solution. Students learn how PV systems operate as well as basic system design and safety practices. The course covers basic electrical terminology, solar fundamentals, detailed discussion of system components, electrical and mechanical design considerations and OSHA safety standards. This course will prepare students for the NABCEP PV Entry Level Exam.	
CALIFORNIA – Novato **Marin Community College** **District College of Marin** 1800 Ignacio Blvd. Novato, CA 94949 **Contact:** Laurie Loeffler **Email:** laurie.loeffler@marin.edu **Phone:** (415) 457-8811 ext. 8108	**ELEC 139 Solar Installation and Integration:** This course is designed as an intro course targeted to entry-level installers with the intent to provide a foundation of skills in trades involved in solar installation. The course is separated into 3 distinct areas: Electrical Theory and Practice, Photovoltaic Theory and Integration, and Building Trade Skills. The program will be a balance of theory, practice and real world examples.	
CALIFORNIA – Oakland **Laney College** **(Peralta Community College**	**Introduction To Photovoltaics** Theory and lab on Photovoltaic (solar) system wiring. Learn solar-safety in hands-on wiring. Learn installation practices installing solar

CALIFORNIA – Oceanside/ Cardiff **MiraCosta College** Dept of Community Services and Business Development 1 Barnard Drive Oceanside, AZ 92056 **Contact:** Linda Kurokawa, Director **Email:** lkurokawa@miracosta.edu **Phone:** 888.895.8186 **Websites**: www.miracosta.edu/community www.mccae.org	**ONE WEEK Entry Level Course for Solar Photovoltaic (PV) Installation & Design.** Our specialized course curriculum provides the novice, or the experienced Electrical Contractor, with the required knowledge and skills mandatory for proper solar PV system installations. We cover ALL the NABCEP required outline material with heavy emphasis in basic electricity, site evaluations, sizing the PV system properly, safety, balance of system (BOS) equipment, trouble shooting, Grid Tied and Stand Alone systems. NEC codes are reviewed and "Hands-on" training is provided. In addition, the student will be given up to date information regarding the market conditions in the Solar industry, job activities and web sites for solar professional use. Our Small Wind Energy Systems class covers NABCEP's Small Wind Task Analysis guidelines and offers an excellent opportunity to gain knowledge for hybrid Solar PV systems. We will teach you how to "APPLY" the knowledge NABCEP wants you to learn!	
CALIFORNIA – Palm Desert **College of the Desert** Applied Sciences and Business 43-500 Monterey Ave. Palm Desert, CA 92260 **Contact:** Larry McLaughlin, **Email:** lmclaughlin@collegeofthedesert.edu **Phone:** (760) 773-2595 **Website**:	This course will examine the theoretical and technical dimensions of solar power systems, focusing on solar photovoltaic technologies. Students will learn how solar photovoltaic cells work and how they are made. The basic electrical theory and calculations of electrical capacity/requirements for photovoltaic systems will be reviewed. Topics will include materials and manufacturing, system components, codes, tools and safe work practices. PV system efficiency and pay-back potential will be	

FACILITY/INSTITUTION	PV COURSES	SH COURSES
www.collegeofthedesert.edu	analyzed to better understand its viability as an alternative energy source. The course will also provide an introduction to solar thermal systems. The course will be conducted initially as part of a larger program funded by the California Energy Commission to prepare workers for utility-scale solar energy employment. However, it is intended to be a comprehensive, stand-alone course as it pertains to residential/commercial applications and NABCEP exam preparation.	
CALIFORNIA – Pasadena **Pasadena City College** Engineering and Technology Division 1570 E Colorado Blvd Pasadena, CA 91106 **Contact:** Sam Abedzadeh **Email:** sxabedzadeh@pasadena.edu **Phone:** (626) 585-7274 / (626) 585-7267 **Website**: www.pasadena.edu	**Basic PV Design and Installation Program covers:** **Introduction to Photovoltaic Systems:** Intro to PV terminology, concepts, vocabulary, techniques and safety. Application and benefits of different PV systems. PV system sizing and cost estimating. **Photovoltaic Theory and Installation Techniques:** Solar electricity fundamentals, PV safety, site analysis, PV system sizing and design. Product installation, troubleshooting, net metering laws and NEC requirements for PV systems.	
CALIFORNIA – Pleasant Hill **Diablo Valley College** 321 Golf Club Road Pleasant Hill, CA 94523 **Contact:** Tom Chatagnier **Email**: tchatagnier@dvc.edu **Phone:** (925) 685-1230, Ext. 2522	**Photovoltaic System Design and Installation (ENSYS 130)** Course includes site evaluations using the solar pathfinder, photovoltaic module characteristics and specifications, inverter characteristics and specifications, design and installation methods, the NEC related to PV systems. The course includes many hands-on activities setting up Sunny Boy and Xantrex inverters and top-of-pole and tracker configurations. Includes off-grid systems.	
CALIFORNIA – Redding **Shasta Builders Exchange** 5800 Airport Road Redding, CA 96002 **Contact:** Tracy Lokstadt, Director of	**Solar Photovoltaic Installation** *Including practical hands-on learning* This program covers: PV Markets and Applications, Safety Basics, Electricity Basics, Solar Energy Fundamentals, System Components, PV System Sizing Principles, PV

Rocklin, CA 95677 **Contact:** Michael Kane, Interim Dean, Sciences and Mathematics Division **Email**: mkane@sierracollege.edu **Phone:** (916) 660-7900 **Website**: www.sierra.cc.ca.us/	**ESS30 – Beginning Photovoltaic Systems** Introduction to photovoltaic concepts, applications, and the solar energy industry. Includes basics of electricity, load, estimation, energy efficiency, solar sire surveying, photovoltaic system components, sizing, financial analysis, design, installation concepts, and maintenance. **ESS32 – Intermediate Photovoltaic Systems** Expands on the fundamentals of photovoltaics with a focus on system design and installation concepts of grid-connected residential and small commercial systems. Topics include: detailed system sizing, array layout, mounting on various roof constructions, mechanical integration, electrical integration, as well as related electrical codes and workplace safety standards. This course, taken with ESS30 prepares the student to sit for the NABCEP Entry Level Exam.	
CALIFORNIA – Sacramento **American River College** Electronics Technology/Energy 4700 College Oak Drive Sacramento, CA 95814 **Contact:** Fred Evangelisti **Email**: evangef@arc.losrios.edu **Phone:** (916) 484-8675 **Website**: www.arc.losrios.edu/~electron	Students will earn a ***Solar Photovoltaic Installation Certificate*** when they complete the five courses outlined below: • **Electronics 302:** Principles of Electricity and Electronics (108 hrs) • **Energy 140/299:** Electrical Applications for Solar Installers (108 hrs) • **Energy 141**: Electrical & Mechanical Applications for Solar Installers (108 hrs) • **Energy 142:** Review and Preparation for the NABCEP Entry Level Exam (32 hrs) • **Energy 143:** Design, Installation and Troubleshooting of Solar PV Systems (108 hrs) The sequence of classes is:	

FACILITY/INSTITUTION	PV COURSES	SH COURSES
	Electronics 302, Energy 140/299, and then Energy 141 and 142 are taken concurrently. The students will be eligible to take the NABCEP Entry Level exam after these four classes are completed. The capstone class for the entire certificate program is Energy 143 which includes advanced system design and troubleshooting.	
CALIFORNIA – San Bruno **Skyline College** 3300 College Drive San Bruno, CA 94066 **Contact:** Mike Williamson **Email:** williamsonm@smccd.edu **Phone:** (650) 738-4221 **Website**: www.skylinecollege.edu	**ELEC 410 Introduction to Solar Installation and Integration:** This is an introductory course targeted to junior-level photovoltaic installers to provide a foundation of skills necessary in solar installation. Topics include electrical theory and practice, PV theory and integration and building trades skills. This course is composed of traditional classroom, electronics and solar labs. The college has a dedicated solar classroom with inverters, panels and roofs to teach installation techniques. Minimum 48 hrs lecture and 16 hrs lab work.	
CALIFORNIA, San Diego **San Diego Electrical Training Center** 4675 Viewbridge Avenue San Diego, CA 92123-1644 **Contact:** Bert Richardson **Email:** brichardson@sdett.org **Phone:** (858) 569-6633 **Website**: www.positivelyelectric.com	This course is provided as an elective, career-path option to apprentices in their fourth and fifth years. The course consists of fifty-one hours of classroom lecture and fifty-one hours of hands-on lab that includes construction of a rack-mounted array and installation of systems on various commercial and residential projects.	
CALIFORNIA – San Francisco **City College of San Francisco** 1400 Evans Avenue San Francisco, CA 94124 **Contact:** Clifford M. Parsley **Email:** cparsley@ccsf.edu **Phone:** (415) 550-4449 **Website**: www.ccsf.edu	**Photovoltaic Installation, Entry Level** This course is an introduction to the planning, installation and maintenance of Solar Photovoltaic Systems. It includes hands-on installation of PV systems and associated safety issues. Traditional classroom instructions, 2 hours lectures and 3 hours lab per week for 17.5 weeks.	**CNST 104: Solar Thermal Installation** Training for installers of solar water heating systems. Emphasis in on system components, design, installation, troubleshooting and safety. Components of active/passing and direct/indirect systems are taught, as are techniques to optimize installation. Particular focus is on installation and mounting of solar collectors, water heater and storage tanks and piping. System check-out techniques are practiced.

Included will be the wiring of a PV system and demonstration of wind generation and hydroelectric systems. Information will also be provided on the California rebate process and installer certification requirements for home-based alternative energy systems. Students will have the opportunity to design their own site-specific system.	
CALIFORNIA – San Ramon **Laborers Union Training and Retraining Trust Fund for Northern California-San Ramon Training Center** 1001 Westside Drive San Ramon, CA 94583-4098 **Contact**: Jerome Williams, Supervisor of Training **Email:** jwilliams@norcalaborers.org **Phone:** (925) 828-2513 **Website**: norcalaborers.org/ContactTrainining	**Photovoltaic Systems (PV-2)** Photovolataic Systems (PV-2) is a comprehensive 70 hour learner focused hands-on course of instruction and includes: PV safety, PV history, markets & applications, solar energy fundamentals, system components, site evaluation, PV system sizing principles, basic system design, mechanical attachments & integration, electrical integration, performance analysis, maintenance & troubleshooting. Successful completion of this course will qualify participants to take the NABCEP PV Entry Level Exam. **Prerequisites: Intro to PV (PV-1), OSHA 10 and out of class study required.**	
CALIFORNIA – Santa Monica **Santa Monica College** 1900 Pico Blvd. Santa Monica, CA 90405 **Contact:** Ruth Casillas **Email:** cassillas_ruth@smc.edu **Phone:**(310) 434-4023 **Website**: www.smc.edu	**Introduction to Solar Energy Systems** Students will gain an understanding of the principles applied to solar photovoltaic and thermal systems. The basic electrical theory and calculations of electrical/capacity requirements for PV systems will be reviewed. Thermal properties, materials, and heat transfer strategies for thermal systems will also be reviewed. Topics will include materials and manufacturing, system components, codes and safe installation procedures. Students will examine the economic, regulatory and infrastructure issues affecting the adoption of solar technologies as well as their potential in solving energy and environmental problems.

CALIFORNIA – Santa Rosa **Santa Rosa Junior College** 1501 Mendocino Ave Santa Rosa, CA 95401 **Contact:** Kimberlee Messina **Email:** Kmessina@santarosa.edu **Phone:** (707) 527-4246 **Website**: www.santarosa.edu	**ELEC156 – Photovoltaic Systems Design and Installation** This course provides technical background and hands on training in grid-tied and battery based photovoltaic system design and installation. It focuses on the technology; how it works and how it is applied in real world energy production applications. After developing a basic understanding of electrical power, photovoltaic technology, and the sun as an energy source, students learn the skills necessary to become involved in residential and small commercial photovoltaic system design and installation. These include; load analysis, system sizing, site review, equipment selection and layout, system installation, and troubleshooting. Through hands-on labs, emphasis is placed on safety and NEC code compliance.	
CALIFORNIA – Ukiah **Mendocino College** 1000 Hensley Creek Road Ukiah, CA 95482 **Contact:** Orion Walker **Email:** owalker@mendocino.edu **Phone:** (707) 468-3224 **Website**: www.mendocino.edu	**SST 190 – Introduction to Photovoltaics (Solar)** This course introduces students to the fundamentals of photovoltaic (solar) technology and the process of residential PV system design and installation. This course includes instruction and practice in site evaluation, basic financial analysis, and code compliant PV system design and installation. Students learn the basic concepts and skills needed to work with potential clients and prepare for entry-level employment in the solar PV industry.

Check our website for more details. SEI highly recommends that students take PV101 and PV203 before sitting for the Entry Level Exam. SEI students can take the exam at our Paonia, CO facility or through computer-based testing.	**PV 101 Solar Electric Design and Installation (Grid-Direct):** This course will provide an overview of the three basic PV system applications, primarily focusing on grid-direct systems. The goal of the course is to create a fundamental understanding of the core concepts necessary to work with all PV systems, including: system components, site analysis, PV module criteria, mounting solutions, safety and commissioning. The course will also cover the basics of sizing a residential grid-direct system, wire sizing, overcurrent protection, and grounding --all of which will be expanded upon in PV202. **PV202 Grid Direct Design and the NEC**: This workshop will build upon the core concepts from PV101 and continue to emphasize grid-direct systems. The course will focus significantly on the National Electrical Code (NEC), including grid interface calculations, grounding considerations, and advanced component specification. Students will learn to evaluate system performance under various operating conditions. Commercial system design elements, such as inter-row shading, inverter selection, and data monitoring solutions will also be covered. This course combines class lectures with individual problem solving exercises covering common design considerations. **PV203 Battery-Based Design:** This course will build upon the core concepts from PV101, with a specific emphasis on battery-based system design. Students will work through step-by-step; design process for battery-based applications, including stand-alone (off-grid), grid-tied with battery back-up, and hybrid systems. Topics such as load	**ST101: Solar Training - Solar Hot Water Design and Installation** Participants in this workshop will learn the theory, design considerations and installation strategies necessary to install and maintain a solar domestic hot water system. Passive solar water heaters, drainback systems, antifreeze systems, and photovoltaic powered systems are discussed in depth, as well as an introduction to pool and space heating systems. The workshop will include some hands-on labs and tours of solar hot water systems.

HAWAII - Honolulu **Honolulu Community College** 874 Dillingham Boulevard Honolulu, HI 96817 **Contact:** Ismelda Agbisit **Email:** iagbisit@hawaii.edu **Phone:** (808) 847-9823 **Website**: www.pcatt.net	**Introduction to Solar Photovoltaic Design** This course is for anyone who is interested in learning how to produce electricity from the sun. It will be useful for people seeking employment in the solar energy industry as well as for those seeking to generate solar electricity for their own home or organization. It is also for anyone who recognizes the need to support an environment that is sustainable and economically viable using methods that won't pollute or exhaust the resources of our planet. PV systems utilize a variety of equipment, some of which is manufactured through sophisticated and complex technologies. We will learn about the main components of a PV system and the basics of the principles by which they are able to transform energy from sunlight to electricity. This will include systems that are tied to the utility grid as well as systems that stand alone or include storage backup with batteries. Once the right type of equipment is selected we need to know how much is required, where to put it, and how to connect it. This is the key to intelligent PV design. Understanding these principles will be a main focus for the class.

Preparing a PV system design is a key component of the course. Case studies will also be examined. The course provides the skills suitable for a supervised, entry level position in the photovoltaic industry.	
HAWAII - Kaneohe **Windward Community College** 45-720 Keaahala Road Kaneohe, HI 96744 **Contact: Preshess Willets-Vaquilar** **Email:** preshess@hawaii.edu **Phone:** (808) 235-7365 **Website**: windwardcce.org/	**Introduction to Photovoltaic Design and Installation** This course is your first step toward building a career as a nationally recognized certified Solar PV Installer or certified PV Technical Salesperson. Basics of electricity, principles of solar irradiance and irradiation, and PV System components/configurations will be covered. Completing this course is required to be eligible to take the NABCEP PV Entry Level exam. A person who passes the exam has demonstrated a basic knowledge of photovoltaic systems, which is an important first step in preparing individuals to become highly skilled, qualified and experienced tradespersons and professionals in the PV industry. ****According to Hawaii law, all electrical work needs to be performed by a licensed electrician.	
HAWAII - Kauai **Kauai Community College** 3-1901 Kaumualii Highway Lihue, HI 96766 **Contact**: Robert Conti **Email:** rconti@hawaii.edu **Phone:** (808) 245-8327 **Website**: kauai.hawaii.edu	**Introduction to Solar Photovoltaic Design** This course is for anyone who is interested in learning how to produce electricity from the sun. It will be useful for people seeking employment in the solar energy industry as well as for those seeking to generate solar electricity for their own home or organization. It is also for anyone who recognizes the need to support an environment that is sustainable and economically viable using methods that won't pollute or exhaust the resources of our planet. PV systems utilize a variety of equipment, some of which is manufactured through sophisticated and complex technologies. We will	

FACILITY/INSTITUTION	PV COURSES	SH COURSES
	learn about the main components of a PV system and the basics of the principles by which they are able to transform energy from sunlight to electricity. This includes systems that are tied to the utility grid as well as systems that stand alone or include storage backup with batteries. Once the right type of equipment is selected we need to know how much is required, where to put it, and how to connect it. This is the key to intelligent PV design. Understanding these principles will be a main focus for the class.

Logan College offers two solar design and installation courses. The Beginning course is an **introduction to photovoltaic systems**, design, and procedures commonly practiced in the photovoltaic industry and trade. The course is primarily intended for those with a construction and construction management background who seek to become skilled photovoltaic installers, electricians, or designers. The **Advanced Solar Design and Installation** course provides detailed instruction in the design and installation of photovoltaic systems with practical, hands-on practice. Those who successfully complete the advanced course will have the knowledge and skill sets required for entry level positions within the renewable energy industry and will be able to converse with solar energy professionals. The final examination for the advanced course is the examination for the NABCEP PV Entry Level Exam.	
ILLINOIS, Godfrey **Lewis & Clark Community College** 5800 Godfrey Road (TR145) Godfrey, IL 62035 **Contact:** Michael Morgan **Email:** mmorgan@lc.edu **Phone:** (618) 468-4922 **Website**: www.lc.edu	**Photovoltaics (PV)** This course provides an introduction to the basic principles of PV design, installation guidelines, and safety issues involved with PV power systems.	
ILLINOIS, Kankakee **Kankakee Community College-** **Technology Division, Electrical Technology Program** 100 College Drive Kankakee, IL 60901	Kankakee Community College (KCC) offers a Renewable Energy Technology (RET) study-track within its Electrical Technology Program. This is the first of two courses to prepare students for the NABCEP Entry Level PV exam. **ELM 2402 Photovoltaic Systems Installation, Maintenance and Troubleshooting** Photovoltaic (PV) Systems Installation and Maintenance covers the installation and commissioning of various photovoltaic systems and applicable National Electrical Code articles. This is the second of two courses to prepare students for the NABCEP Entry Level PV exam.	
MINNESOTA - Minneapolis **Minneapolis Community and Technical College** 1501 Hennepin Ave. Minneapolis, MN 55403 **Contact:** Greg Skudlarek **Email:** Greg.Skudlarek@minneapolis.edu **Phone:** (612) 659-6424	**Introduction to Solar PhotoVoltaics** This course covers the basics of photovoltaic solar energy systems. You will receive hand-on training and experiment with simulated lab projects involving solar photovoltaic systems. Must be in or have completed an accredited electrical training program.	
MINNESOTA - Minneapolis **Minneapolis Electrical JATC** 13100 Frankfort Parkway NE St. Michael, MN 55376 **Contact:** Daryl Thayer **Email:** daryl_solar@yahoo.com **Phone:** (612) 229-4381	**Solar Electric Basic:** Teaches principles of photovoltaic electrical theory, system design and installation. Also electrical-optical-thermal performance of PV cells & modules, system types and components, mounting PV arrays and related code. **Solar Electric Advanced:** Covers the NEC issues in solar installation and focuses on the utility grid interactive PV systems. Topics include safety, AC/DC grounding, wiring methods, inverter use and selection.	
MINNESOTA - St. Paul **St. Paul Electrical JATC, IBEW Local 110** 1330 Conway Street St. Paul, MN, 55106	**Solar Course:** Students in this course will learn the fundamental solar theory of the conversion of light energy into electrical energy. Topics covered but not limited to include module construction, definitions, site selection, sizing arrays, BOS (Balance of system)	

FACILITY/INSTITUTION	PV COURSES	SH COURSES
Contact: Edward Nelson, Assistant Training Director **Email:** ENelson@ibew110.org **Phone:** (651) 772-8773	equipment, system installation, NEC (National Electrical Code) rules and troubleshooting. Both battery and grid connected systems are covered in detail. Lab time will include actual mounting of support system and modules on two different roof covering, grid tie connection to premise wiring and troubleshooting techniques. Students will also use a SunEye to determine the best location for the array. Upon completion of the course the students will be prepared to take NABCEP's entry level certificate test.	
MINNESOTA - St. Paul **St. Paul College** **Customized Training and Continuing Education** 60 East Plato Boulevard Drake Building, Suite 150 St. Paul, MN 55107 **Contact:** Cheryl Beaumier **Email:** cheryl.beaumier@saintpaul.edu **Phone:** 651-846-1438 **Instructor**: Daryl Thayer **Website**: training.saintpaul.edu	**Entry-level course in Photovoltaic systems and PV Entry Level Exam**. This seven (7) day series, 56 hours of training consists of class room lecture, computer analysis, to hand-on demonstrations and problem solving using Solar PV equipment. Ten (10) essential skill-sets of Learning Objectives are provided. They are as follows: • PV Markets and Applications • Safety Basics • Electricity Basics • Solar Energy Fundamentals • PV Module Fundamentals • System Components • PV System Sizing • PV System Electrical Design • PV System Mechanical Design • Performance Analysis and Troubleshooting	
MINNESOTA – White Bear Lake **Century College** 3300 Century Ave North White Bear Lake, MN 55110 **Contact**: Scott Randall **Email**: Scott.randall@century.edu **Phone**: 320-259-4893 **Website**: www.century.edu	**Solar Energy** We offer a 16 credit solar site assessment certificate which covers basic installer and site assessment knowledge and skills. We also offer a 32 credit advanced solar PV certificate that covers in depth PV design and preparation for the NABCEP installer exam.

Renewable Energy Technology 3201 W. 16th Street Sedalia, MO. 65301-2199 **Contact:** Mark Kelchner, Dean, Technical Education and Workforce Innovation **Email:** mkelchner@sfccmo.edu **Phone:** (660) 596-7402 **Website**: www.sfccmo.edu	Solar PV industry. The program is structured to provide students with a fundamental understanding of the theory and application of the various types of renewable energy technology. The program enables each student to develop an in-depth understanding of how to design, specify, adapt, implement, configure, install, inspect, and maintain photovoltaic systems, including grid-connected and stand-alone systems, with or without battery storage for residential and commercial applications. The program will offer students both class room and hands on lab experience, as well as an opportunity to install a system on a building. Internship opportunities will be offered. In addition, the program will emphasize OSHA safety training and detailed understanding of the National Electrical Code as it applies to the installation of Solar PV systems. The curriculum is structured to cover all the objectives for the North American Board of Certified Energy Practitioners (NABCEP) Entry Level Exam.	
MONTANA - Missoula **University of Montana – College of Technology** Department of Applied Computing and Electronics 909 South Ave W Missoula, MT 59801 **Contact:** Beth Shirilla **Email:** beth.shirilla@umontana.edu **Phone:** (406) 243-7916 **Instructor**: Greg Guscio **Website**: www.cte.umt.edu	**NRG243 Fundamentals of Photovoltaic Design & Installation** is an introduction to the basic principles and technologies of solar photovoltaic power generation systems. Emphasis is on system design and installation, including site and resource assessment, calculation of energy inputs and power outputs, load analysis, trouble shooting, and cost analysis. The material covered prepares students for a career in renewable energy or for installing a renewable energy system on their own home. **Prereq./coreq**. EET105 DC Circuit Analysis, or approved equivalents.	
NEVADA - Las Vegas **Southern Nevada Electrical JATC** 62D Legion Way Las Vegas, NV 89110	**Photovoltaics Level I**: An introductory class on solar photovoltaics. Topics discussed are: components of a solar system, how and what constitutes the solar power industry, safety, plus hands-on lab

This is in alignment with the NABCEP Entry-Level Exam task analysis and prepares people to go to work for solar installers. It is 42 contact hours and is offered through the ACC Continuing Education department. This is our original course and we have offered it every semester since Spring of 2006. **HART 1072**	

FACILITY/INSTITUTION	PV COURSES	SH COURSES
Phone: (512) 223-7662 (Robert McGoldrick at ACC)	Advanced Solar Photovoltaic Installer. This is an advanced course (48 contact hours) in alignment with the NABCEP Professional-Level task analysis and prepares installers to take the NABCEP professional-level solar installer exam once they have the experience requirements as stated by NABCEP. This course is offered through the ACC Continuing Education department. We offered this course for the first time in Spring of 2008. **ELMT 2474** Solar Photovoltaic Systems. This is an intermediate level (96 contact hours) and is in alignment with the NABCEP Entry-Level Exam task analysis and prepares people to go to work for solar installers. This is a for-credit course offered through the Electronics and Advanced Technologies department. It is a requirement for our new 2-year associates degree in renewable energy. We offered this course for the first time in Spring of 2008. *Each of the above three courses are approved by NABCEP as satisfying the training pre-requisite for sitting for the Entry-Level exam.* *Each course also qualifies as a NABCEP-approved training program for reducing the experience requirement for the professional-level solar installer exam. All three courses are college-level full-semester courses.*	
TEXAS - Austin **Imagine Solar** 4000 Caven Road, Austin, TX 78744 **Contact:** Alicia Cloud **Email:** info@imaginesolar.com or alisha.cloud@imaginesolar.com **Phone: (**888) 514-1972 **Website:** www.imaginesolar.com	**PV100 Series: Photovoltaic System Design & Installation** (Formerly named PV201) This series of workshops meets the requirements to sit for the NABCEP PV Entry Level Exam and follows the ISPQ standards. Our expanded 48-hour PV100 Series supersedes our 40-hour PV201. The PV100 Series also includes hands-on labs including a utility-interactive installation and an off-grid installation. Our customers have always appreciated the hands-on components of our training so we	

FACILITY/INSTITUTION	PV COURSES	SH COURSES
	include it in our entry-level training. The PV100 Series can be taken as three separate courses: PV150: Grid-Tied PV System Installation PV160: Grid-Tied PV System Design PV170: Off-Grid PV System Design and Installation: The complete series is required for the NABCEP PV Entry Level Exam. Therefore, upon completion of these courses, you can sit and take the NABCEP Entry Level PV Exam at a Computer Based Center authorized by NABCEP. Our workshop assumes no previous experience. It is appropriate for the serious non-technical beginner as well as electrical contractors, electricians, engineers, and entrepreneurs. Training modules include the following: The Photovoltaic Industry and the Qualified Solar Pro; Basics of Electricity; The Solar Resource; Site Assessments; Tools for the Solar Professional; System Components and Configurations; Cells, Modules, and Arrays: Specifications, Technologies, Vendor Comparisons; Batteries and Charge Controllers; Inverters: Types and Specifications; System Sizing and Design; Mechanical Integration; Electrical Integration: National Electric Code, Voltage Drop; Utility Interconnection; System Installation and Commissioning; Performance and Troubleshooting. Attendees of the complete PV100 Series will be provided the textbook titled Photovoltaic Systems by Jim Dunlop from American Technical Publishers as well as the ImagineSolar custom course materials. As an alternative, you may take our online course PV201e: PV System Design & Installation. Our online course covers the NABCEP PV Entry Level Learning Objectives but does not include hands-on labs. For the hands-on labs and the utility-interactive installation you can take PV201eLab. You will be provided

UTAH - Salt Lake City **Salt Lake Community College** 4600 South Redwood Road Salt Lake City, Utah 84123 **Contact Course Coordinator**: Judy Fisher **Email:** judy.fisher@slcc.edu **Phone:** (801) 957-5252	**Basic PV Installation** CEAE 0200 This 45 hour course introduces students to the basic principles of utility interactive photovoltaic system design. Through classroom instruction and Solar Training Yard hands-on lab activities, the course will provide the knowledge to conduct site evaluations, prepare a basic electrical and mechanical design and select appropriate components such as: PV modules, inverters, racking, wire types, wire sizes and overcurrent protection, all in accordance with the local municipality and the 2011 NEC code. Students who successfully complete this class could seek a supervised, entry level position with a dealer/installer or other photovoltaic industry company. In addition, students meet the education requirement and receive solid preparation to take NABCEP's PV Technical Sales Certification exam (along with other NABCEP required field experience.)* Achieving a passing score demonstrates basic knowledge of design, installation and application of photovoltaic systems. Potential employers may use this as a benchmark to assess candidates. The same textbook is used for both the Basic Photovoltaic Systems and the Advanced Photovoltaic Systems courses. It is available at the Taylorsville-Redwood Campus bookstore. The National Electrical Code Handbook is required for the Advanced course. *For more information, please visit NABCEP's web site, www.nabcep.org. Check the Utah Division of Occupational and Professional Licensing (DOPL) web site, www.dopl.utah.gov, for current licensing rules and regulations. Course meets 6 hours core and 11

The curriculum used was developed by the NJATC in conjunction Jim Dunlop and combines a blend of classroom instruction and hands-on activity. Journeyman Electricians are instructed in all facets of PV installations, including solar theory, system design, safety, NEC Code, and troubleshooting. Due to the advanced nature of the course, it is limited to individuals possessing a journeyman electrician's certification, including a minimum of 10,000 hours of electrical construction experience. Upon successful completion of the NABCEP Entry Level Exam, participants will be awarded a Certificate of Completion by the NJATC.	
WISCONSIN - Custer **The Midwest Renewable Energy Association (MREA)** 7558 Deer Road Custer, WI 54423 **Contact**: Stephen Knudsen **Email**: stephenk@midwestrenew.org **Phone**: 715-592-6595-106 **Website:** www.midwestrenew.org **ONLINE Options**	**All three of courses are required and available through the MREA either online or in person.** **Basic PV (PV 101)** Teaches the basics of solar electric systems including PV system types, system component identification, best application and limitations of each system type, defining the solar window, system loads, and energy efficiency recommendations. **PV Site Assessment Training (PV 201)** Teaches how to perform a PV site assessment for a home or small business. Covers site assessment tools, load analysis, array placement options, basic system sizing, cost estimates, PV system performance calculators, and invectives. **PV System Design (PV 202)** Participants use example site assessments, PV system component design examples, and PV system case studies to learn about selecting equipment, system sizing, layout planning, array siting, and other design considerations. All three training courses are	**ST 101 – Solar Domestic Hot Water** ***Or*** **STO 101 - Solar Domestic Hot Water Online** ***And*** **ST 301 – Solar Hot Water Installation Lab** Students will attend two separate workshops. Students must complete ST 101, either online or in person, and then attend a 3-day Solar Hot Water Installation Lab. Students will learn all aspects of site analysis, system design, installation, safety, code, and troubleshooting & maintenance. Total course length is 32 hours. Courses are a mixture of lecture and hands-on.

FACILITY/INSTITUTION	PV COURSES	SH COURSES

WISCONSIN - Green Bay **Northeast Wisconsin Technical College** 2740 W. Mason Street Green Bay, WI 54307 **Contact**: Amy L. Kox **Email:** amy.kox@nwtc.edu **Phone:** (920) 498-6908 **Website:** www.nwtc.edu	**Energy-Intro to Solar Electricity** is an overview of the use of sunlight to produce electricity and the practical and economic use of PV power systems. Learn the importance of energy efficiency and the economics of PV-generator hybrid designs. (3 credits.) **PV-Design & Site Assessment** will teach the steps to performing a site audit prior to installation of a PV system. Focus on defining the solar window, system site placement and sizing, lead analysis and energy efficiency. (2 credits) Northeast Wisconsin Technical College offers a *Renewable Energy Solar Certificate program.*	
WISCONSIN - Port Wing **Great Northern Solar – Education** 77480 Evergreen Rd. Ste.1 Port Wing , WI 54865 **Contact**: Christopher LaForge, ISPQ Certified Independent Master Trainer **Email:** gosolar@cheqnet.net **Phone: (**715) 774-3374	Great Northern Solar - Education Division offers three program paths covering the Entry Level Learning Objectives. They include: 1) Completion of our standard curriculum - Basic Photovoltaics, Intermediate Photovoltaics, and either Photovoltaic Hands-on Lab or an Advanced Photovoltaic Installation, 2) Independent study with GNS-ED covering the same EL learning objectives over a longer period, or 3) Completion of The GNS-ED Advanced Intensive Class-room and Hands-on Lab program (42 contact hours). No set prerequisites, candidates should have a strong understanding of electrical and Photovoltaic concepts.
