

REGISTERED PROVIDERS FOR the NABCEP® ENTRY LEVEL PV EXAM

*Please Note: This list is in alphabetical order **BY STATE/Territory***

**There are currently:
14,400+ Students who have passed the NABCEP Entry Level Exam
307 Providers of the PV Entry Level Exam**

Please contact the provider(s) for more information about any course(s) listed below.

FACILITY/INSTITUTION	COURSE NAME(S)
ALABAMA – Auburn Smart North America 570 Devall Drive Suite 303 Auburn, AL 36832 Contact: Ruth Page-Nelson E-mail: sgna@smartgridnorthamerica.com Tele. (800) 764-3085 www.smartgridnorthamerica.com	Solar Photovoltaics This course will provide 40 hours of training covering the NABCEP required learning objectives in preparation for the Entry Level Exam. Participants will get hands-on and classroom training. Completion of this course will result in students who are prepared to enter the field and obtain further training and experience needed to become proficient installers.
ALABAMA – Decatur Calhoun State Community College Department of Renewable Energy P.O. Box 2216 Decatur, AL 35609-2216 Contact: Jerry W. Adams, Director ACECET/Renewable Energy E-mail: jadams@calhoun.edu Tele. (256) 306-2642 www.calhoun.edu	REN 115 This course covers basic principles and design of photovoltaic (PV) systems. Upon completion of the course, students should have demonstrated a basic understanding of PV markets and applications, safety basics, electricity basics, solar energy fundamentals, PV module fundamentals, system components, PV system sizing and electrical and mechanical design, and performance analysis, maintenance and troubleshooting. The course prepares the student to take the NABCEP PV Entry Level Exam. Though highly recommended, taking the exam is not a mandatory requirement of the course.
ARIZONA – Chandler Chandler-Gilbert Community College Center for Workforce Development 2626 Pecos Road Chandler, AZ 85225 Contact: Ruth Romano, Director of Workforce Development E-mail: ruth.romano@cgcmail.maricopa.edu Tele. (480) 732-7071	Photovoltaic System Design & Installation This course will provide students with a comprehensive understanding of the skills necessary to be proficient in the design & installation of photovoltaic cells. This workshop provides a complete background in electrical basics and mathematical applications, photovoltaic application, mechanical design & system installation.

<p>www.cgc.edu</p>	
<p>ARIZONA – Flagstaff</p> <p>Coconino Community College Community & Corporate Learning 2800 S. Lone Tree Rd. Flagstaff, AZ 86001</p> <p>Contact: Alex Wright E-mail: alex.wright@coconino.edu Tele. (928) 526-7647</p> <p>www.coconino.edu</p>	<p>Photovoltaic System Installation Course This course will provide an overview of the basic PV system design and application. The goal is to bridge the understanding of electrical load (from utility bill) and the PV technology with an emphasis on utility-connected residential PV system. Topics for this course: Basic electrical principles, introduction to photovoltaic systems, solar radiation, site survey and preplanning, balance of system, cells, module, array, system sizing, array mounting, utility requirements (net metering), renewable energy tax incentives, safety, tools, and the National Electric Code. In addition, off grid PV system topics include: load analysis, balance of system, charge controllers, batteries, parallel and series wiring, operation and maintenance.</p>
<p>ARIZONA – Mesa</p> <p>Arizona State University College of Technology and Innovation: The Collaboratory 6075 S Williams Campus Loop W Technology Center Room 147 Mesa, AZ 85212</p> <p>Contact: Kristyn Pineda E-mail: kris.pineda@asu.edu Tele. (480) 727-1312</p> <p>http://collaboratory.asu.edu/home</p>	<p>Photovoltaic System Design and Installation The 40 hour course will provide an overview of the basic PV system design and application. The goal is to provide an understanding of electrical loads and the ability to offset this with solar power. The emphasis will be on utility-connected residential PV systems along with a basic understanding of off-grid systems. Topics: basic electrical principles applied to PV, intro to PV systems, solar radiation, site survey and pre-planning, utility requirements, safety, specialized tools and the National Electric Code. Additional topics: cells, modules, arrays, system sizing, array construction, balance of system part, load analysis, charge controllers, batteries, selection of proper materials, operation and maintenance. Lab exercises include: electrical & site survey tools, module measurements, effects of temperature and shading, and system commissioning. After-class homework assignments will all students to further practice what was learned in class.</p>
<p>ARIZONA – Phoenix</p> <p>eRenewable Resource Institute, Inc. 4001 E. Broadway Rd., Suite B-20 Phoenix, AZ 85040</p> <p>Contact: Donna Marie Bertault E-mail: donna@erenewableresource.com Tele. (480) 446-0400</p> <p>www.erenewableresource.com</p>	<p>PV100 Solar Installation and Design This ISPQ accredited class is presented for beginning or experienced audiences, and is an entry-level training that provides excellent preparation for a solar installation career. Focusing on a safety-first approach and designed with input from experienced solar installers, this course prepares the student for the jobsite by explaining concepts, practices, regulations, tools, and terms related to the industry.</p> <p>Students are introduced to concepts of basic electricity through solar power generation and grid-integrated systems, and have the opportunity to work with electricity lab kits, solar panels, and site evaluation</p>

	<p>equipment and software.</p> <p>This 40 hour course is formatted for in-person, hands-on instruction conducted by expert trainers.</p>
<p>ARIZONA – Phoenix</p> <p>Gateway Community College Industrial Technology Division 108 N 40th Street, Phoenix, AZ 85034</p> <p>Contact: Dr. Clyde Perry, Division Chair E-mail: clyde.perry@gwmail.maricopa.edu Tele. (602) 286-8615</p> <p>www.gatewaycc.edu</p>	<p>AEN 2010 Spring – 9999 Photovoltaics Design and Installation Design, operation, installation and service of photovoltaics.</p> <ol style="list-style-type: none"> 1. Describe the types of photovoltaics systems. 2. Explain electrical principles. 3. Calculate electrical values. 4. Determine the proper solar location. 5. Determine electrical loads. 6. Explain the electron theory for photovoltaic and performance factors. 7. Explain battery technology. 8. Calculate battery size for a given installation. 9. Define the types of controllers. 10. Select the proper controller for an application. 11. Explain the proper controllers for an application. 12. Calculate wiring systems for photovoltaic. 13. Determine proper sizing of PV systems. 14. Demonstrate installation of a solar system. 15. Demonstrate safe working habits.
<p>ARIZONA – Phoenix</p> <p>The Refrigeration School Inc. 4201 East Washington Street Phoenix, AZ 85034</p> <p>Contact: Sherry Jones, Executive Director E-mail: sherry.jones@rsiaz.edu Tele. (602) 267-4801</p> <p>www.refrigerationschool.com</p>	<p>Solar Technology (Online) This program is designed to provide students with basic knowledge of photovoltaic systems (PV), suitable for a supervised, entry level position within the PV industry. This program gives participants a greater understanding of solar technology and the:</p> <ul style="list-style-type: none"> • Safety Basics • Electricity Basics • Solar Energy Fundamentals • PV Module Fundamentals • System Components • PV System Sizing • PV System Electrical Design • PV System Mechanical Design • Performance Analysis and Troubleshooting <p>Fundamentals of Solar (Hands-on) This module provides an overview of photovoltaic (PV) science and an introduction to the fundamentals of solar energy. Through a combination of lecture, problem solving and hands-on lab exercises, students will learn the concepts and processes of photovoltaic systems, including their design and installation. The module covers the scope of solar energy systems conceptual, mechanical and electrical design, with an emphasis on wiring and electrical issues. 100 hours.</p>

<p>ARIZONA – Phoenix</p> <p>Phoenix College Custom Training and Education 640 N. 1st Avenue Phoenix, AZ 85003</p> <p>Contact: Roberta Jeffers, Director of Business & Industry Partnerships E-mail: r.jeffers@pcmail.maricopa.edu Tele. (602) 223-4053</p> <p>www.pc.maricopa.edu/pcdt</p>	<p>Photovoltaic (Solar Energy) Entry Level Program This course is especially created to take a person with NO knowledge of electricity or solar component parts and get them to understanding the basics of electricity and understanding how the solar modules create electricity.</p> <p>This class offers the students a very good “Hands On” training session showing how the entire PV system is assembled, the component parts are wired together by the students, array is assembled, trouble shooting is demonstrated, commission steps taken and the system is activated “heated up”.</p> <p>You learn many facets of the solar installation process, how the entire solar system functions within the existing home and electrical grid.</p> <p>Any construction and electrical experience is helpful in the actual “hands on” or installation phase of this industry.</p>
<p>ARIZONA – Prescott</p> <p>Prescott College Environmental Studies 220 Grove Avenue Prescott, AZ 86301</p> <p>Contact: David Hanna, Instructor E-mail: dhanna@prescott.edu Tele. (928) 350-2224</p> <p>www.prescott.edu</p>	<p>Small-scale Energy Solutions & Photovoltaic System Design: ENV41310</p> <p>This course investigates the role that small-scale energy systems can play in addressing sustainability on the global energy front. An overview of energy sources will be discussed with focus on readily available technologies such as photovoltaic (PV), wind and micro-hydro energy systems. We will compare and contrast the attributes of grid-tied systems and independent, off-grid, energy systems. Students will quantitatively evaluate their personal energy consumption patterns and apply this knowledge to assess conservation strategies. This information will be applied to developing skills in designing a small-scale photovoltaic energy system. Students will develop an understanding of the necessary components of a PV system, installation design strategies, code requirements and currently available state and federal incentive programs.</p>
<p>ARIZONA – Scottsdale</p> <p>Sonoran Desert Institute 10245 East Via Linda, Suite 110 Scottsdale, AZ 85258</p> <p>Contact: Pam Rogers E-mail: pamr@sdi.edu Tele. (480) 314-2102</p> <p>www.sdi.edu</p>	<p>Based upon the NABCEP learning objectives, this program provides basic knowledge of photovoltaic systems, suitable for a supervised, entry level position with a PV industry company. Topics include the key NABCEP topics of:</p> <ul style="list-style-type: none"> • Safety Basics • Electricity Basics • Solar Energy Fundamentals • PV Module Fundamentals • Systems Components • PV System Sizing • PV System Electrical Design • PV System Mechanical Design • Performance Analysis and Troubleshooting

<p>ARIZONA – Tucson</p> <p>Pima Community College 2202 W. Anklam Road Tucson, AZ 85709 Contact/Instructors: Lazaro Hong, Ph.D, Chien-Wei Han, Ph.D e-mail: Lazaro.Hong@pima.edu, Chien.Han@pima.edu Tele. (520) 206-6603</p> <p>www.pima.edu</p>	<p>TEC 198T5: Photovoltaic Installation Training: Introduction to photovoltaic energy and photovoltaic (PV) systems installation. Includes markets and applications, safety basics, electricity basics, energy efficient appliances, solar energy fundamentals, PV materials, module fundamentals, concentrators, system components, system sizing, electrical design, mechanical design and performance analysis and troubleshooting. 3 credit hours, lecture and lab. Traditional classroom with heavy hands-on component.</p>
<p>ARIZONA – Tucson</p> <p>Tucson College 5151 E. Broadway #155 Tucson, AZ 85711 Contact: Al Valenzuela e-mail: al.valenzuela@tucsoncollege.edu Tele. (520) 258-0431</p> <p>www.tucsoncollege.edu</p>	<p>SE 100 Solar Energy – Photovoltaic Systems: Student will study basic solar electricity, PV application & system components, also included are solar site analysis, utility-interactive PV systems, component specification, and system cost and economics. Student will research & evaluate cases studies and real life systems application. Traditional classroom lecture: 48 hours</p>
<p>ARIZONA – Tucson</p> <p>Tucson Electrical Joint Apprenticeship & Training Program 1949 W. Gardner Lane Tucson, AZ 85705</p> <p>Contact: Karen King, Training Director Email: tejatp@tucsonelectricaljatp.org Tele. (520) 790-4690</p> <p>www.tucsonelectricaljatp.org</p>	<p>Photovoltaic Systems Class: Apprenticeship training: Introduction to photovoltaic systems; solar radiation; site surveys and preplanning; system components and configurations; cells, modules and arrays; batteries; charge controllers; inverters; mechanical integration; electrical integration; utility interconnection; permitting & inspection. Traditional hands-on application and course curriculum. Held on Saturdays.</p>
<p>ARIZONA – Yuma</p> <p>Arizona Western College PO Box 929 Yuma, AZ 85366-0929</p> <p>Contact: Daniel Barajas, Dean of Career & Technical Education Division Email: daniel.barajas@azwestern.edu Tele. (928) 344-7769</p> <p>www.azwestern.edu</p>	<p>Course description pending</p>

<p>CALIFORNIA</p> <p>Sean White Solar IREC/ISPQ Independent Master Trainer</p> <p>Contact/Instructor: Sean White e-mail: sean@pvstudent.com Tele. (925) 482-4176</p>	<p>Entry Level Solar PV Design & Installation</p> <p>This course follows the NABCEP Entry Level Learning Objectives in order while at the same time covers every task in the NABCEP PV Installer Job Task Analysis (JTA). Additionally, there is a good deal of hands-on PV Installation. Also, we will connect to and feed the grid with a utility interactive PV System.</p>
<p>CALIFORNIA – Aptos</p> <p>Cabrillo College 6500 Soquel Drive Aptos, CA 95003</p> <p>Contact/Instructor(s): Chuck Mornard, Joe Jordan, Steve Murphy e-mail: chmornar@cabrillo.edu Tele. (831) 423-2824</p>	<p>Photovoltaic Design & Installation - CEM162PD</p> <p>This is a “hands-on” course for training students and preparing them for field work.</p>
<p>CALIFORNIA – Bakersfield</p> <p>Kern Community College District 2100 Chester Avenue Bakersfield, CA 93301</p> <p>Contact: David Teasdale, Director, Southern Sierra Clean Energy Cooperative e-mail: dteasdal@kccd.edu Tele. (661) 336-5011</p> <p>http://www.kccd.edu</p>	<p>Course Title: Solar Photovoltaic Entry-level Technician Training</p> <p>This training program is designed to introduce the prospective students to the international photovoltaic market, which has been growing at more than 30% each year. We provide a modern, interesting approach to learning by mixing hands-on classroom participation, self-directed e-learning online, field trips, and real-world labs that fit the needs of today’s busy students. Successful participants will have been provided the information necessary on safety & electricity basics, solar energy & PV module fundamentals such as wiring, inverter, & panel mounting techniques, as well as components and system sizing. We also provide necessary concepts in site surveying, grid-tie and off-grid installations, electrical and mechanical design, and instruct the student in system performance analysis and troubleshooting. The skills and knowledge gained through this training will prepare the participant to sit for the NABCEP PV Entry-Level Exam and for an entry-level job with solar energy related businesses and integrators.</p>
<p>CALIFORNIA – Bakersfield</p> <p>Solar Seminars, Inc. 4303 E Brundage Lane</p>	<p>PV 101: Entry Level Solar Photovoltaic Installation Using NABCEP’s ten learning objectives for the entry level PV installer, PV 101 teaches students how to safely and efficiently design, situate, and install a solar electric system.</p>

<p>Bakersfield, CA 93307</p> <p>Contact: Anne Markward, Registrar e-mail: anne@solarseminars.org Tele. (970) 779-8796</p> <p>www.solarseminars.org</p>	<p>We teach PV 101 in two different formats: either a traditional 5-day, classroom and practice based environment, or a blended format that combines the best of on-line, interactive learning with two days (16 hours) of hands-on installation experience.</p>
<p>CALIFORNIA – Blythe</p> <p>Palo Verde College One College Drive Blythe, CA 92225</p> <p>Contact: George Walters, Associate Dean e-mail : george.walters@paloverde.edu Tele. (760) 921-5507</p>	<p>Solar PV Theory and Applications This course will examine the theoretical and technical dimensional of solar power systems, focusing on solar photovoltaic technologies. Students will learn how solar photovoltaic cells work and how they are made. The basic electrical theory and calculations of electrical capacity/requirements for photovoltaic systems will be reviewed. Topics will include materials and manufacturing, system components, codes, tools and safe work practices. PV system efficiency and payback potential will be analyzed to better understand its viability as an alternative energy source. The course will also provide an introduction to solar thermal systems.</p> <p>The course will be conducted initially as part of a larger program funded by the California Energy Commission to prepare workers for utility-scale solar energy employment. However, it is intended to be a comprehensive, stand alone course as it pertains to residential/commercial applications and NABCEP exam preparation.</p> <p>The course curriculum was modeled after the Los Angeles Unified School District curriculum as recommended by Brian Hurd, former instructor.</p> <p>Primary Text: Dunlop, J., Photovoltaic Systems, American Technical Publishers (2007), and the NABCEP Study Guide.</p>
<p>CALIFORNIA – Calexico</p> <p>CCAC International Polytechnic Institute 2320 M.L. King Calexico, CA 92231</p> <p>Contact: Enrique G. Alvarado e-mail : alvaradoeg@ccac-vtc.org Tele. (760) 357-2995</p>	<p>Electrical – 900 hours</p> <p>This 900 hour Electrical course has recently been upgraded to include all 10 skills sets identified on the NABCEP Learning Objectives. (PV markets & applications, PV system electrical design, mechanical design, etc.)</p>
<p>CALIFORNIA – Cotati</p> <p>Sun Pirate, Inc P.O. Box 187 Cotati, CA 94931</p> <p>Contact: Roger Coghlan, President</p>	<p>Entry Level PV Program – Sun Pirate’s Entry Level PV Program consists of our IREC accredited, self-paced Photovoltaic System Design and Installation Online Course (60 contact hours), and our Electrical and Safety Basics for Solar Installers Online Course. Students will receive instruction in solar electrical theory, working safely with PV, basic load analysis, system sizing, components, and installation and design practices.</p>

<p>e-mail: ret-training@sunpirate.com Tele. (707) 792-6929</p> <p>www.sunpirate.com</p>	<p>These courses are aligned with the 10 NABCEP Entry Level Learning Objectives. Upon completion of these courses, student can sit and take the NABCEP Entry Level PV Exam at a Computer Based Center authorized by NABCEP.</p>
<p>CALIFORNIA – Eureka</p> <p>College of the Redwoods Dept.: Applied Technology 7351 Tompkins Hill Rd. Eureka, CA 95501</p> <p>Contact: Steve Brown, Dean, Career and Technical Education e-mail: steve-brown@redwoods.edu Tele. (707) 476-4347</p> <p>www.redwoods.edu</p>	<p>A course designed to provide students with essential information and training to work with residential solar photovoltaic systems. Course content includes fundamentals of AC/DC, the National Electric Code, and principles of a residential solar photovoltaic systems. Upon successful completion of the course, students will be given the opportunity to take the NABCEP PV Entry Level Exam (North American Board for Certified Energy Practitioners, Inc.) Achievement of the NABCEP PV Entry Level Exam is a way for individuals to demonstrate that they have achieved a basic knowledge of the fundamental principles of the application, design, installation and operation of grid-tied and stand-alone PV Systems.</p>
<p>CALIFORNIA – Hopland</p> <p>The Solar Living Institute 13771 S. Highway 101 Hopland, CA 95449</p> <p>Contact: Karen Kallen, Managing Director Email: karen.kallen@solarliving.org Tele. (707) 472-2456</p> <p>http://www.solarliving.org/</p>	<p>PV 200: PV Design and Installation Intensive. This dynamic course is an excellent five day intensive workshop that will immerse you in the ever-expanding PV market. This course will prepare you for the NABCEP entry level exam and give you practical hands-on labs to fully understand PV systems. The course covers both on and off grid PV with an emphasis on grid tied residential systems. We take care to cover every aspect of PV design installation; energy efficiency, safety, electricity basics, PV Modules, new PV Technology, Inverters, Mounting Systems, Components (BOS) and Sizing, PV Electrical and Mechanical design, Performance Analysis and Troubleshooting, and Economics of PV. This course is particularly good for those seeking employment in the PV field, but will give the homeowner a great education in PV fundamentals.</p>
<p>CALIFORNIA – Laguna Hills</p> <p>Allied American University 22952 Alcalde Drive Laguna Hills, CA 92653</p> <p>Contact: James Parent Email: jparent@alliedschools.com Telephone: (888) 384-0849 ext.5704</p> <p>www.allied.edu</p>	<p>SOL200: Introduction to Photovoltaic Systems</p> <p>In this course, students develop trade knowledge of photovoltaic (PV) systems based on the learning objectives for NABCEP PV Entry Level Program. Solar-electric (and other kinds of solar) technologies are introduced, along with the history and current trends in the industry. Applications and benefits of PV are explored, along with the workings of all typical components and methodologies for design of whole systems. Best practices for safety are emphasized throughout, including the use of protective equipment and ways to avoid accidents and minimize workplace hazards.</p>

<p>CALIFORNIA – Laguna Hills</p> <p>Allied Business Schools 22952 Alcalde Drive Laguna Hills, CA 92653</p> <p>Contact: Jesse Marcks – Renewable Energy Admissions Manager Telephone: (800) 732-7410</p> <p>www.training4green.com</p>	<p>Introduction to Photovoltaic Systems – Students learn the fundamentals of electricity and solar energy, including how to calculate simple circuit values and predict solar position using a variety of tools and techniques. These concepts are then applied to all the considerations needed in site evaluation, including load (electrical demand) analysis as well as decisions among several types of PV system configurations and mountings. System sizing and the mechanical and electrical integration for both stand-alone and grid-interactive PV installations are covered in detail. Performance analysis and issues, along with troubleshooting techniques, are important parts of this material.</p> <p>Completion of this course will give students a thorough understanding of photovoltaic systems and their applications, as well as all the basics for designing, installing, and maintaining them. Students will be prepared to take the North American Board of Certified Energy Practitioners (NABCEP) PV Entry Level examination.</p>
<p>CALIFORNIA – Livermore</p> <p>Solar Universe, Inc. Solar University, Training Division 5902 Las Positas Road Livermore, CA 94551</p> <p>Contact/Instructor(s): Michael Hynes, VP of Training and Development Email: mhynes@solaruniverse.com Tele. (925) 455-4700</p> <p>www.solaruniverse.com www.sunprotraining.com</p>	<p>SunPro Tech Solar PV Installer Training Solar University's SunPro Tech Solar PV Installer training course was designed by trade professionals to turn beginners into solar professionals in a fast and effective learning environment. The intensive immersion style training program is taught in a fully equipped solar installation vocational training facility with hands-on exercises exactly as they are experienced in the field. The SunPro course was designed with the premise that the best way to learn is by doing.</p> <p>During the 5-day SunPro training sessions, students work with experienced instructors to build and operated five different solar power systems. Class sizes are limited to a maximum of 20 students to guarantee the optimum instructor to student ratio throughout the hands-on exercises.</p> <p>The SunPro training session consists of approximately 40% classroom lecture and 60% hands-on field lab work.</p>
<p>CALIFORNIA – Lompoc</p> <p>Allan Hancock College One Hancock Drive Lompoc, CA 93436-2755</p> <p>Contact: Rick Rantz, Dean Email: rrantz@hancockcollege.edu Tele. (805) 735-3366, ext. 5203</p> <p>www.hancockcollege.edu</p>	<p>Photovoltaic Systems This course is based on the NABCEP PV Entry Level Learning Objectives. This course helps prepare students for a supervised, entry level position with a dealer and/or installer of PV solar systems.</p>

<p>CALIFORNIA – Los Angeles</p> <p>Abram Friedman Occupational Center 1646 South Olive Street Los Angeles, CA 90015</p> <p>Contact: Jay Wehbe, Instructor Email: jmwehbe1@yahoo.com Tele. (213) 765-2400 x2505</p> <p>www.afoc.edu</p>	<p>Photovoltaic 1 This competency based course in solar electricity introduces students to the field of photovoltaics (PV). Students will receive instruction in solar electrical theory, PV safety, related vocabulary and terminology, types of PV systems, basic load analysis, system sizing, metering laws, and employment opportunities in the industry. The course provides a comprehensive review of the NABCEP learning objectives in order to prepare students for the NABCEP PV Entry Level Exam.</p>
<p>CALIFORNIA – Los Angeles</p> <p>Coast Career Institute, Inc. 1345 South Hill Street Los Angeles, CA 90015</p> <p>Contact: Sherry Pruett Email: ccisherry@sbcglobal.net Tele. (213) 747-6289</p> <p>www.coastcareer.com</p>	<p>Solar Installation Training:</p> <p>Our program prepares students for an entry level position for installation of Photovoltaics systems. The course covers core material for photovoltaic principles, system wiring, mounting, system installation, maintenance and trouble shooting.</p>
<p>CALIFORNIA – Los Angeles</p> <p>East Los Angeles Skills Center Los Angeles Unified School District 3921 Selig Place Los Angeles, CA 90031 Contact/Instructor(s): Brian Hurd, Bob Bower Email: bhhurd@sbcglobal.net Tele. (323) 224-5970</p>	<p>Photovoltaic Installer: Entry Level Exam Preparation: Participants will receive instruction in solar electrical theory, PV safety, related vocabulary and terminology, types of PV systems, basic load analysis, system sizing, components and hardware, code issues, rebates and incentives, basic cost estimating, net metering laws and employment opportunities in the industry.</p>
<p>CALIFORNIA – Los Angeles</p> <p>Los Angeles Trade Technical College 400 West Washington Blvd. Los Angeles, CA 90015 Contact/Instructor(s): Dave Robinson, William Elarton Email: cdm@lattc.edu Tele. (213) 763-3700</p> <p>http://college.lattc.edu/nabcep</p>	<p>ECONMT 105: Fundamentals of Solar Electricity (Traditional classroom lecture with demonstrations)</p> <p>ECONMT110: Renewable Energy Systems (Traditional classroom lecture with demonstrations)</p> <p>ECONMT205: Solar Energy Installation & Maintenance (hands-on lab where students will install and troubleshoot operational systems)</p>

<p>CALIFORNIA – Los Angeles</p> <p>New Technology Training Center 3171 Casitas Ave, Suite 145 Los Angeles, CA 90039</p> <p>Contact: Hamid Kowsari, President Email: info@nttisite.com</p> <p>Tele. (818) 247-0989</p> <p>www.newtechtrain.com</p>	<p>Alternative Energy Practitioner: (100 hour program with traditional classroom lecture plus hands-on exercises). This program is designed to provide a rigorous foundation of knowledge and skills for entry level PV installers. It covers basic mathematics and electrical circuit theory; solar fundamentals, PV components, and PV system design and performance simulation. We will make use of on-line tools to aid electrical and mechanical system design and system simulation. PV system design will include mechanical and electrical issues. There will be a section on NEC-compliant design including wire ampacity, grounding, component listing, interconnection and labeling; and a section on how to work with tools and OSHA workplace safety. The program will be organized around four critical tasks: (1) Sizing Systems to meet customer objectives, (2) the Site Survey, (3) Detailed System Design and Simulation, and (4) System Installation and Troubleshooting.</p>
<p>CALIFORNIA – Menlo Park</p> <p>JobTrain 1200 O'Brien Drive Menlo Park, CA 94025</p> <p>Contact: Alonzo Emery, Director of Program Operations Email: aemery@jobtrainworks.org Tele. (650) 330-6424</p> <p>www.jobtrainworks.org</p>	<p>Two options:</p> <p>Solar Energy: Design and Installation Module 1 is 12 weeks, 9 hours weekly and 2 evenings and a Saturday morning every week for a minimum total of 108 hours. Participants will gain technical skills and a strong foundation of how to safely install grid-tied solar electric systems in the Bay Area. This course starts out with the very basics of electricity, solar cycles, photovoltaics (PV) and incrementally accelerates students to photovoltaic hands-on labs. Further real experience is gained by actual job site installation experience with Grid Alternatives, Habitat for Humanity, and others, as available from third parties.</p> <p>Solar Energy: Design, Installation and Remediation Modules 1-6 (Module 7: optional, extra hours) are 21 weeks, 6 hours daily and 5 days a week for a minimum total of 600 hours. Participants will gain technical skills and a strong foundation of how to safely install grid-tied photovoltaic (PV) solar electric systems for the Bay Area. Additional trade/skills include energy efficiency: energy audit, test-in and test-out measurements and remediation for a healthy house. Participants will demonstrate design and build. This course starts out with the very basics of electricity, solar cycles, photovoltaics (PV) and incrementally accelerates students to photovoltaic hands-on labs. Further real experience is gained by actual job site installation experience with Grid Alternatives, Habitat for Humanity, and others.</p>
<p>CALIFORNIA – Modesto</p> <p>Modesto Junior College Technical Education Department 435 College Ave Modesto, CA, 95350</p>	<p>ELTEC 321: Photovoltaic Systems: The study of PV systems: off-grid, interconnected and hybrid. The course includes the study of PV systems, positioning, electrical and mechanical design and integration (including hands-on experiences), working safely with PV systems, financial topics (system estimate and rebates) and an overview of NABCEP certification requirements.</p>

<p>Contact: Andrian DeAngelis, Professor of Electronics Technology Email: deangelisa@mjc.edu Tele. (209) 575-6088</p> <p>www.mjc.edu</p>	
<p>CALIFORNIA – Murrieta</p> <p>Ambassador Energy, Inc. 24630 Washington Ave. Suite 102 Murrieta, CA 92562</p> <p>Contact: Steve Fulgham Email: info@ambassadorsenergy.com</p> <p>Tele. (866) 586-1840</p> <p>www.mjc.edu</p>	<p>Entry Level Solar PV Design and Installation: This course is an introduction to PV components, system design, industry codes and standards for PV system, and unique design problems and solution. Students learn how PV systems operate as well as basic system design and safety practices. The course covers basic electrical terminology, solar fundamentals, detailed discussion of system components, electrical and mechanical design considerations and OSHA safety standards. This course will prepare students for the NABCEP PV Entry Level Exam.</p>
<p>CALIFORNIA – Newark</p> <p>Ohlone College 39399 Cherry Street, Newark, CA 94560</p> <p>Contact: Narinder Bansal Email: nbansal@ohlone.edu</p> <p>Tele. (510) 742-2360</p>	<p>ENVS 104 PV Installation and Design is a beginning course in Solar Electricity. Students learn the basics of AC and DC electricity and practice wiring series, parallel, and series-parallel circuits using small solar modules, analogue and digital meters. Students learn the three major types of residential PV systems—utility interactive, interactive with battery backup, and stand alone. They are given hands-on practice wiring up stand alone systems; they also wire and install a complete 300 volt DC utility interactive system. Students also learn the process of engineering all three types of systems. For their final project students size a residential system, choose components, and produce a three line diagram of their designs. Safety is a major element of this course. Students study and practice proper procedure for wiring up systems that are over 300 volts DC using full-sized solar modules that are wired in strings of up to eight 24 volt modules.</p>

Our specialized course curriculum provides the novice, or the experienced Electrical Contractor, with the required knowledge and skills mandatory for proper solar PV system installations. We cover ALL the NABCEP required outline material with heavy emphasis in basic electricity, site evaluations, sizing the PV system properly, safety, balance of system (BOS) equipment, trouble shooting, Grid Tied and Stand Alone systems. NEC codes are reviewed and “Hands-on” training is provided. In addition, the student will be given up to date information regarding the market conditions in the Solar industry, job activities and web sites for solar professional use. Our Small Wind Energy Systems class covers NABCEP’s Small Wind Task Analysis guidelines and offers an excellent opportunity to gain knowledge for hybrid Solar PV systems. We will teach you how to “APPLY” the knowledge NABCEP wants you to learn!</p>

(970) 527-7657 x206</p> <p>http://www.solarenergy.org/</p>	<p><i>Solar Energy International offers the following training. Our online courses are 6 weeks in length and our in-person workshops, which are 5-6 days in length, are offered all across the country. Check our website for more details. SEI highly recommends that students take PV101 and PV203 before sitting for the Entry Level Exam. SEI students can take the exam at our Paonia, CO facility or through computer-based testing.</i></p> <p>PV 101 Solar Electric Design and Installation (Grid-Direct): This course will provide an overview of the three basic PV system applications, primarily focusing on grid-direct systems. The goal of the course is to create a fundamental understanding of the core concepts necessary to work with all PV systems, including: system components, site analysis, PV module criteria, mounting solutions, safety and commissioning. The course will also cover the basics of sizing a residential grid-direct system, wire sizing, overcurrent protection, and grounding --all of which will be expanded upon in PV202.</p> <p>PV202 Grid Direct Design and the NEC: This workshop will build upon the core concepts from PV101 and continue to emphasize grid-direct systems. The course will focus significantly on the National Electrical Code (NEC) , including grid interface calculations, grounding considerations, and advanced component specification. Students will learn to evaluate system performance under various operating conditions. Commercial system design</p>

	<p>elements, such as inter-row shading, inverter selection, and data monitoring solutions will also be covered. This course combines class lectures with individual problem solving exercises covering common design considerations.</p> <p>PV203 Battery-Based Design: This course will build upon the core concepts from PV101, with a specific emphasis on battery-based system design. Students will work through step-by-step; design process for battery-based applications, including stand-alone (off-grid), grid-tied with battery back-up, and hybrid systems. Topics such as load analysis, component selection, battery safety, voltage drop, and commissioning procedures will be presented. In addition to sizing exercises and calculations, students will explore additional design and considerations unique to battery-based systems.</p> <p><i>We also offer five-day intensive lab weeks. Our PV201L Solar Electric Lab Week (Grid-Direct) is designed to follow PV101 or PV203. Our PV201L Solar Electric Lab Week (Battery Based) is designed to follow PV203.</i></p>

The course curriculum is designed to comply with the Learning Objectives required by NABCEP.</p>
<p>CONNECTICUT, North Haven</p> <p>Gateway Community College 88 Bassett Road North Haven, CT 06473</p> <p>Contact: Dr. David N. Cooper, Dean, Corporate and Continuing Education Department. Email: dcooper@gwcc.commnet.edu Tele. (203) 285-2426</p> <p>www.gwcc.commnet.edu</p>	<p>Solar Photo Voltaic Installer Training: Classroom and laboratory components include demonstration of electrical concepts, electrical experiments, and skill practice exercises installing PV components. Students will learn solar energy concepts, basic processes and mechanical operations of PV devices, system sizing, building codes and underwriting issues, load determination and system performance, mounting structure considerations, interconnection requirements, PV energy storage, and net metering. Students who complete the program will learn the fundamentals of how to properly site a system, how to design the right system, and how to cost grid tied and battery storage systems. Students will obtain a practical understanding of long-term system costs and will obtain current information on state and federal rebates and tax incentive programs.</p>
<p>CONNECTICUT, Rocky Hill</p> <p>IEC of New England, Inc. 1800 Salas Deane Highway Rear Building Rocky Hill, CT 06067</p> <p>Contact: Earl Goodell, Training Director. Email: earl@iecne.org Tele. (860) 563-4953</p> <p>www.iecne.org</p>	<p>In this course students will walk through the entire process associated with sales, siting, design and installation of photovoltaic (PV) systems. This will proceed from initial customer interest through to a successfully installed system that will pass electrical and mechanical inspection. Students will learn about the history and applications of solar electricity. They will discover how photovoltaic cells convert sunlight into electricity and learn how to evaluate different products that are on the market. Students will study the technical specifications for the components of a solar electric system and learn how to properly specify components that work together to produce electricity to meet both on and off-grid electric loads. Procedures for the safe, code-compliant installation and maintenance of photovoltaic systems will be explored. At the end of the course students will have the opportunity to sit for the NABCEP PV Entry Level Exam.</p>
<p>CONNECTICUT, Wallingford</p> <p>NECA & IBEW Local 90 JATC 2 North Plains Industrial Road Wallingford, CT 06492</p>	<p>Solar Photovoltaic Design, Installation and Maintenance This course will introduce students to photovoltaic design, installation, and maintenance of PV systems. The course will follow the NJATC Photovoltaic text. The classroom theory and hands-on training will cover the following learning objectives: PV Markets & Applications, OSHA Construction Safety, NFPA 70E</p>

<p>FLORIDA, Tallahassee</p> <p>Tallahassee Community College 444 Appleyard Drive Tallahassee, FL 32304</p> <p>Contact: Alex Dalmau Email: dalmaua@tcc.fl.edu Tele. (850) 201-8653</p> <p>http://workforce.tcc.fl.edu/training/florida_green_academy</p>	<p>Introduction to Photovoltaics This course covers the design and installation of PV systems. This program primarily targets contractors, electricians, utilities, engineers, and other practitioners, with an overall goal of developing —system knowledgeable professionals to help ensure the safety and quality of PV system design and installations. An emphasis is placed on code compliance and accepted state-of-the-art industry design and installation. This course includes a hands-on section where participants will build a functioning solar PV system, from design to mounting on a roof, to generating electricity for charging batteries or tying into the local electrical grid. Text: <i>Photovoltaic Systems, 2nd Edition</i> by James Dunlop.</p>
<p>FLORIDA, Winter Garden</p> <p>Westside Technical Center/ Orange County Public Schools 955 East Story Road Winter Garden, Florida 34787</p> <p>Contact: Dr. Jody Newman Email: bryantj6@ocps.net Tele. (407) 905-2009</p> <p>www.westside.ocps.net</p>	<p>Basic Solar Installation Westside Tech offers basic solar photovoltaic instruction for those seeking entry level training to become a solar installer. This course provides training in basic electrical principles and terminology focusing on electrical current flow and types of installation (students will learn to relate the three quantities of electrical current flow, identify series/parallel installation, explain the results of each installation, draw a series/parallel circuit and show the effect on current voltage and resistance); factors relative to site selection (conducting site surveys, evaluating roof accessibility/condition/age, shading/exposure), Hardware installation (proper selection of tools, lay out of mounting site, sealing techniques, mounting sequence), Maintaining and troubleshooting a system, and Panel Installation/Connections. Students will also be provided the opportunity to complete on-site solar photovoltaic practical application projects.</p>

(702) 459-7949</p>	<p>Photovoltaics Level I: An introductory class on solar photovoltaics. Topics discussed are: components of a solar system, how and what constitutes the solar power industry, safety, plus hands-on lab time.</p>

<p>NEVADA – Reno</p> <p>Truckee Meadows Community College 7000 Dandini Blvd Reno, NV 89512</p> <p>Contact/Instructor(s): Wes Evans e-mail : wevans@tmcc.edu Tele. (775) 856-5316 Web: www.tmcc.edu</p>	<p>Solar Photovoltaic Certification: This course is designed to give students the basic knowledge of solar energy principles and photovoltaic applications. Topics will be application, safety, basic electricity, solar energy fundamentals, PV module fundamentals, system components, PV system sizing, mechanical design, performance analysis and troubleshooting.</p>
<p>NEW HAMPSHIRE, Laconia</p> <p>Lakes Region Community College 379 Belmont Road Laconia, NH 03246</p> <p>Contact: Wes Golomb, Mark Weissflog e-mail: wgolomb@ccsnh.edu mweissflog@kwmanagement.com Tele. (603) 524-3207 ext. 763</p>	<p>Entry Level Solar Photovoltaic Installation: This course covers the ten NABCEP Learning Objectives. The course uses “PV Systems” as a text. Mark Weissflog, NABCEP PV Certified Installer, is the instructor.</p> <p>There are ten 3-hour classroom meetings and two 8-hour days of field work which include a PV installation.</p>
<p>NEW JERSEY, Blackwood</p> <p>Camden County College 420 N. Woodbury-Turnersville Rd. Blackwood, NJ 08012</p> <p>Contact: Sivaraman Anbarasan, Executive Dean of Continuing Education E-mail: sanbarasan@camdencc.edu</p> <p>Tele. (856) 874-6004</p> <p>www.camdencc.edu</p>	<p>Solar Panel Installation:</p> <p>This 70 hour training will be delivered at Camden County College by qualified instructors from the college and the industry. The curriculum covers principals and application of solar panel installation including an overview of photovoltaic electricity and system components, including PV modules, batteries, controllers, inverters and electrical loads. This course was designed based on the model (PV Entry Level Learning Objectives) developed by NABCEP for the PV Entry Level Exam.</p>
<p>NEW JERSEY, Bloomfield</p> <p>Bloomfield College Institute for Technology and Professional Studies 467 Franklin Street Bloomfield, NJ 07003</p> <p>Contact: Rachael Cooper, Director of Professional Studies E-mail: rachael_cooper@bloomfield.edu Tele. (973) 748-9000 ext. 658</p>	<p>This course will cover concepts on how to maximize lighting energy savings and fundamental knowledge in the field of solar energy. It will include an overview guide of doing a lighting audit, and recommended actions and responses to results from the assessment. Students will be taught a five step process on developing and implementing a lighting retrofit program. Following a review of the retrofit lighting program students will be given the trade knowledge of the photovoltaic (PV) systems based on the outlined learning objectives for the North American Board of Certified Energy Practitioners NABCEP PV Entry Level Exam.</p> <p>80 hours classroom and hands on instruction</p>

<p>NEW JERSEY, East Orange</p> <p>Comtec Institute 44 Glenwood Avenue Suite 201 East Orange, NJ 07017</p> <p>Contact: Ade Oluokun Email: comtecjobtraining@hotmail.com Tele. (973) 673-6100</p>	<p>PV Installer Entry Level</p> <p>The purpose of this curriculum is to empower the student with a basic understanding of the photovoltaic system. In this study the individual is taught the principles in PV system designing, installation, energy conservation and efficiency and safety issues relating to electricity and photovoltaic systems. Our goal is to prepare the individual to find an interest in a new and exciting career. Potential graduates will be able to sit for the NABCEP entry level exam. Career opportunities includes; PV system design and installation, customer service associate and DAS (data acquisition System). There is a wide range of in-house lab where the student has hands on energy analysis and system design as well as installation.</p>
<p>NEW JERSEY, Carneys Point</p> <p>Salem Community College The Energy Institute 460 Hollywood Avenue CarneysPoint, NJ 08069</p> <p>Contact: Gail Coley, Administrative Assistant E-mail: coley@salemcc.edu Tele. This course includes sizing systems for both grid-connected and off-grid PV systems. Learn about solar resources, the problems associated with shading and what is the best orientation and tilt for PV arrays. Discuss the basic sizing and design of systems to serve a given electrical load. Learn safety procedures for installers and study the electrical code for PV systems in detail. Study various mounting systems for PV arrays and how they affect roof. Actually install a PV system.</p> <p>Advanced Photovoltaics Systems: This course is geared toward PV installers and engineers who have experience with photovoltaic systems. The basics of PV will not be covered. Topics discussed will include the future of solar energy systems, review of formulas needed to size PV, how to design a PV system with battery backup, PV mounting systems, calculating wind load, weight load on roofs, mounting, safety on roofs, calculating system efficiency, wire sizing, performance monitoring, shading analysis, troubleshooting and complying with NYSERDA forms and regulations.</p>
<p>NEW YORK, Morrisville</p> <p>Morrisville State College PO Box 901 80 Eaton Street Morrisville, NY 13408</p> <p>Contact: Christopher Nyberg, Dean, School of Agriculture and Natural Resources email: nybergcl@morrisville.edu Tele. (315) 684-6083 www.morrisville.edu</p>	<p>Basic Electrical Theory for Renewable Energy Practitioners This course will provide the student with an understanding of basic principles of electricity to include alternating and direct current and Ohm's Law, with an emphasis on DC theory. This course is required for anyone who plans to take Introduction to PV Technology and doesn't have the prerequisite knowledge of electrical theory. (20 hrs.)</p> <p>Introduction to Photovoltaic Technology Designed for a person with a strong personal interest in PV technology as well as those considering a career in solar electric technology, this course will give you the theoretical basis for understanding the various types of solar electric systems. It will cover the history of solar electricity, current markets and industry status, basic electrical theory, and other considerations necessary for solar electric systems. Detailed study of system components as well as the proper and safe electrical interconnection of these components will include hands-on training exercises and experiments. Local visits to PV related facilities and assembly of real world system examples will reinforce classroom learning.</p> <p>Prerequisite: Completion of Basic Electrical Theory or equivalent knowledge. (40 hrs – 24 hours and 16 hours lab)</p> <p>PV Installer's Course In this course, students will develop the knowledge and practical skills needed to install utility-connected and offgrid PV systems. Study of electric load analysis, system and component design and sizing, system siting, shading, electrical and mechanical system configuration, safety, and electrical and building code compliance will</p>

	<p>be supplemented with hands-on system installation. Successful completion of this course will enable the student to sit for the NABCEP PV Entry Level exam. With additional education, training, and installation experience, this certificate can lead to becoming a NABCEP Certified PV Solar Installer.</p> <p>Prerequisite: Completion of Introduction to PV Technology or equivalent course with instructor Approval (40 hrs – 24 hours and 16 hours lab)</p>

Course work includes site analysis for system design, building code recognition and advances in photovoltaic technology. Upon completion of this course, students will understand the principles of photovoltaic technology and its application within the industry.</p> <p><u>ENV 7200 Solar Photovoltaics for the New Clean Energy Economy:</u> This continuing education course is</p>

	intended for individuals who understand the basics of electricity and electric generation, this class will focus on detailed functionality of photovoltaic (PV) system components, and all common PV systems, from straight water pumping to stand alone battery based systems, and grid tie PV with and without batteries. Students will be able to design and size these systems, and see what is involved with interconnection to the utility.
NORTH CAROLINA, Charlotte Charlotte Electrical JATC Apprenticeship / Continuing Education 4324 Barringer Dr., Suite 105 Charlotte, NC, 28217 Contact: Jason Schumm, Instructor email: jsjtc@gmail.com Tele. (704) 523-5001 www.charlottejatc.org	Photovoltaic Systems The course length is 40 hours total. The course will follow the NJATC Photovoltaic System outline and use its associated text and workbook. It will consist of a combination of lab, lecture, and lesson assignments from the workbook. The course outline is as follows: Intro to Photovoltaic Systems, Fundamentals of Solar Radiation, Solar Radiation Data and Measurements, Site Surveys and Planning, Photovoltaic Systems and Components, Fundamentals of Photovoltaic Devices, Photovoltaic Modules and Arrays, Inverters, Electrical Integration I, and Utility Interconnection.
NORTH CAROLINA, Charlotte National Solar Trainers, LLC 115 West 7th Street, Ste. 300 Charlotte, NC 28202 Contact: Edlin Kim, Business Development Manager email: Edlin@nationalsolartrainers.com Tele. (646) 915-5308 www.nationalsolartrainers.com	Solar PV Bootcamp – This course gives students the in-depth knowledge any solar professional needs to know and qualifies them to sit for the sought after NABCEP entry level exam. The course even goes beyond covering the NABCEP entry level requirements to feature an extensive hands-on focus, giving students a unique experience with live demonstrations and working installations. The major portions of this course are fundamentals, sales and estimation, design and installation. This course makes students eligible for commercial-scale PV workshops and webinars focusing on knowledge specific to solar career paths in design, finance, and project management.
NORTH CAROLINA, Durham Durham Technical Community College Continuing Education Department 1637 Lawson Street Durham, NC, 27703 Contact: Jacequeline Mitchell, Continuing Education Program Coordinator email: mitchelj@durhamtech.edu Tele. (919) 536-7222 x4013	Solar Technology - Classroom instruction and hands-on lab will teach students practical design criteria, installation guidelines, safety issues, maintenance, and legal considerations of PV systems. The program is designed for those individuals wanting to get into the solar field; it is a way for them to show they have achieved basic knowledge comprehension and application of key terms and concepts of photovoltaic (solar electric) system operations. The Entry Level Achievement Document demonstrates that the student has passed an industry-designed exam based on learning objectives developed by subject matter experts. As the market grows for photovoltaics, students who have passed this industry-sponsored Entry Level Exam may find that their employment opportunities are enhanced by starting the job with an understanding of the basic terms and operational aspects of a PV system. However, passing the Entry Level Exam, in itself, does not qualify an individual to install PV systems.

<p>NORTH CAROLINA, Huntersville</p> <p>Everblue 8936 Northpointe Executive Park Dr., Suite 140 Huntersville, NC 28078</p> <p>Contact: Vince DiFrancesco, Director of Operations email: vdifrancesco@everblue.edu Tele. <p>OHIO – Toledo</p> <p>Owens Community College Tracy Road P.O. Box 10,000 Toledo, OH 43699-1947</p> <p>Contact/Instructor(s): Joe Peschel, John Witte e-mail: joseph_peschel@owens.edu Tele. (567) 661-7163 www.owens.edu</p>	<p>Photovoltaic Principles and Applications Training Program: This 5 day training program for PV installers/integrators includes classroom and hands-on workshop. The course covers the basics in electricity, the characteristics of PV systems and theory and includes system sizing and construction, codes and standards, siting and design, battery safety, interconnection safety, troubleshooting, and maintenance. The workshop will include the design and installation of a grid-tied PV system. Installation practices of project management, adapting mechanical and electrical design, and system commissioning will also be discussed. Various inverters, PV modules, batteries and data information systems will be installed and operated.</p>
<p>OHIO – Cleveland</p> <p>Cuyahoga Community College Workforce and Economic Development Division 2415 Woodland Avenue Cleveland, OH 44115</p> <p>Contact: Emily Amato E-mail: emily.amato@tri-c.edu Tele. (216) 987-3027 www.tri-c.edu</p>	<p>This 352-hour, 14-credit-hour program provides an overview of the main sources of alternative energy for residential and commercial buildings, as well as a firm technical grounding in residential energy conservation and auditing. Students take a total of five courses to build and apply skills and knowledge in the areas of safety, electrical power, print reading, efficiency, and alternative energy. In addition to their certificate from Cuyahoga Community College, the program will allow students to obtain three nationally-recognized credentials: OSHA 10 for Construction, BPI Building Analyst 1 certification, and the NABCEP Entry-Level exam.</p>
<p>OREGON – Central Point</p> <p>Crater Lake Electrical JATC 4864 Airway Drive Central Point, OR 97502</p> <p>Contact: Claire Lizana, Training Director E-mail: clejatc2@clearwire.net Tele. (541) 773-5888 http://clejatc.clearwire.net/</p>	<p>This course covers all of the basic requirements for system installations:</p> <ul style="list-style-type: none"> • OSHA Safety/Fall Protection • System Design • Mechanical & Electrical Design • Site Assessment • Equipment • Maintenance and Troubleshooting <p>This 24 hour course is presented in three 8 hour sessions. In addition to classroom training, it also includes field training in solar site assessment and hands on training assembling a 1kW Grid Tie Photovoltaic system. At the completion of this course, students have the opportunity to sit for the NABCEP Entry Level exam. This course is also registered with the Building</p>

	Codes Division of the State of Oregon for 24 hours of continuing education credits.
<p>OREGON - Eugene</p> <p>Lane Community College Science/Energy Programs 4000 East 30th Avenue Eugene, OR 97405</p> <p>Contact/Instructor(s): Roger Ebbage, Ryan Mayfield e-mail: ryan_mayfield@earthlink.net Tele. (541) 463-3977</p>	<p>Photovoltaic Design & Installation, I, II and III are offered. Students may take the NABCEP Entry Level exam after taking <i>any one</i> of the three classes.</p> <p>This is a progressive series of courses over three terms. The first class starts with PV basics and electrical basics. The courses cover grid-tie and battery based systems (design and installation), NEC, job site safety, component specification, and system finances. Course structure is traditional classroom with labs, field trips and on-site installation.</p> <p>Prep for the NABCEP Solar PV Entry Level Exam: This course is designed for individuals who have a working knowledge of general electrical concepts and photovoltaics. This intensive two-day class is structured to prepare participants to take the North American Board of Certified Energy Practitioners (NABCEP) Entry Level exam. This Exam allows individuals to meet of the technical requirements of the Oregon Department of Energy's Tax Credit Certified Technician (TCCT) program. Those seeking TCCT status will need to attend an additional state-sponsored training on specific program requirements. The NABCEP Entry Level Exam will be granted to those who successfully participate in the course and pass the two-hour, 60-question exam that will be administered at the end of the course.</p> <p>Due to the fast paced nature of the course, the registration is limited to 30 students.</p>
<p>OREGON – Tangent</p> <p>Central Electrical JATC 33309 Hwy 99E Tangent, OR 97389</p> <p>Contact/Instructor: Greg Creal e-mail: greg@ibew280.org Tele. PENNSYLVANIA – Media Delaware County Community College 901 S Media Line Rd Media, PA 19063 Contact: Karen Kozachyn Email: kkozachyn@dccc.edu Tele. (610) 359-5362 www.dccc.edu	Solar PV System Design and Installation This International Renewable Energy Council (IREC) accredited course is designed to introduce students to grid tied photovoltaic (PV) systems. In this course students will learn the benefits of a grid tied system and the positive impact on the environment these systems can have. At the conclusion of this course students will have the basic knowledge and understanding in design and installation of residential and commercial buildings. This course is patterned after the Job Task Analysis set by the North American Board of Certified Energy Practitioners (NABCEP) Entry-Level Solar PV exam and also fulfills the prerequisite of related experience and education required sit for the industry certification. The certification is not included in the course. Upon successful completion of this course, students will be able to: <ul style="list-style-type: none"> • Verify System Design and determine the requirements for a photovoltaic system • Manage the Project. • Site the requirements to interconnect a photovoltaic system to the power grid. • Properly apply article 690 of the National Electric Code (NEC) • Install Electrical Components. • Install Mechanical Components. • Properly determine the financial benefits of a photovoltaic system • Complete System Installation. Properly size and install a photovoltaic system for a residential and commercial building. • Determine environmental factors that can interfere with a working photovoltaic system • Conduct Maintenance and Troubleshooting Activities.
PENNSYLVANIA, Norristown Star Career Academy 2501 Monroe Boulevard Norristown, PA 19403 Contact: Timothy James E-mail: info@starcareernow.com Tele. (888) 455-3305 www.starcareernow.com	Entry Level Solar Photovoltaic Design & Installation The object of Entry Level PV Design & Installation certificate course is to prepare students for solar installation/green training careers. Through on-site clinical and didactic training, Star Career Academy will educate students on terminology used, installation techniques, and training required to be successful with their future green-based career. The educational objectives will also help students to understand and be able to adhere to the proper protocols and procedures used within this labor environment. This course includes an introduction to PV technology, PV systems design & layout, wiring system configuration, panel installation, a review of the market and industry, and an opportunity to take the NABCEP PV Entry Level Exam.

This is in alignment with the NABCEP Entry-Level Exam task analysis and prepares people to go to work for solar installers. It is 42 contact hours and is offered through the ACC Continuing Education department. This is our original course and we have offered it every semester since Spring of 2006.</p> <p>HART 1072 Advanced Solar Photovoltaic Installer. This is an advanced course (48 contact hours) in alignment with the NABCEP Professional-Level task analysis and prepares installers to take the NABCEP professional-level solar installer exam once they have the experience requirements as stated by NABCEP. This course is offered through the ACC Continuing Education department. We offered this course for the first time in Spring of 2008.</p> <p>ELMT 2474 Solar Photovoltaic Systems. This is an intermediate level (96 contact hours) and is in alignment with the NABCEP Entry-Level Exam task analysis and prepares people to go to work for solar installers. This is a for-credit course offered through the Electronics and Advanced Technologies department. It is a requirement for our new 2-year associates degree in renewable energy. We offered this course for the first time in Spring of 2008.</p> <p><i>Each of the above three courses are approved by NABCEP as satisfying the training pre-requisite for sitting for the Entry-Level exam.</i></p> <p><i>Each course also qualifies as a NABCEP-approved training program for reducing the experience requirement for the professional-level solar installer exam. All three courses are college-level full-semester courses.</i></p>
<p>TEXAS, Austin</p> <p>Imagine Solar 4000 Caven Road, Austin, TX 78744</p> <p>Contact: D.J. Rosebaugh, Director of Training Services Email: info@imagesolar.com Tele. (888) 514-1972</p>	<p>PV100 Series: Photovoltaic System Design & Installation (Formerly named PV201)</p> <p>This series of workshops meets the requirements to sit for the NABCEP PV Entry Level Exam and follows the ISPO standards. Our expanded 48-hour PV100 Series supersedes our 40-hour PV201. The PV100 Series also includes hands-on labs including a utility-interactive installation and an off-grid installation. Our customers have always appreciated the hands-on components of our training so we include it in our entry-level training.</p> <p>The PV100 Series can be taken as three separate courses: PV150: Grid-Tied PV System Installation PV160: Grid-Tied PV System Design</p>

<p>www.imaginesolar.com</p>	<p>PV170: Off-Grid PV System Design and Installation: The complete series is required for the NABCEP PV Entry Level Exam. Therefore, upon completion of these courses, you can sit and take the NABCEP Entry Level PV Exam at a Computer Based Center authorized by NABCEP.</p> <p>Our workshop assumes no previous experience. It is appropriate for the serious non-technical beginner as well as electrical contractors, electricians, engineers, and entrepreneurs.</p> <p>Training modules include the following: The Photovoltaic Industry and the Qualified Solar Pro; Basics of Electricity; The Solar Resource; Site Assessments; Tools for the Solar Professional; System Components and Configurations; Cells, Modules, and Arrays: Specifications, Technologies, Vendor Comparisons; Batteries and Charge Controllers; Inverters: Types and Specifications; System Sizing and Design; Mechanical Integration; Electrical Integration: National Electric Code, Voltage Drop; Utility Interconnection; System Installation and Commissioning; Performance and Troubleshooting. Attendees of the complete PV100 Series will be provided the textbook titled Photovoltaic Systems by Jim Dunlop from American Technical Publishers as well as the ImagineSolar custom course materials.</p> <p>As an alternative, you may take our online course PV201e: PV System Design & Installation. Our online course covers the NABCEP PV Entry Level Learning Objectives but does not include hands-on labs. For the hands-on labs and the utility-interactive installation you can take PV201eLab. You will be provided the textbook titled Photovoltaic Systems by Jim Dunlop from American Technical Publishers for our online course PV201e.</p>
<p>TEXAS, Del Valle</p> <p>SolPowerPeople, Inc. 5035 Hwy 71 E Del Valle, TX 78617</p> <p>Contact: Richard D. Stovall, CEO email: info@solpowerpeople.com Tele. <p>TEXAS, El Paso</p> <p>Franklin College 5700 Cromo Drive El Paso, TX 79912</p> <p>Contact: Robin A. Roberts emails: robin.roberts@franklin-college.edu Tele. (915) 842-0422</p> <p>www.franklin-college.edu</p>	<p>Basics of Solar PV (40 hours) is designed to provide an introduction to solar photovoltaics for individuals with or without construction, engineering, electrical, or plumbing experience and/or training. This course covers the topics of PV Markets and Applications; Safety Basics; Electricity Basics; Solar Energy Fundamentals; PV Module Fundamentals; System Components; PV System Sizing Principles; PV System Electrical Design; PV System Mechanical Design; and Performance Analysis, Maintenance and Troubleshooting. Graduates will be able to register for and take the NABCEP Solar PV Entry Level at IBC following course completion.</p> <p>Construction Technology with a Solar Energy Specialty, a nine-month program (1080 hours), is designed for individuals with no previous construction, electrical, plumbing or renewable energy/energy efficiency training. The course meets daily and offers theory and lab instruction in construction and overlays four modules in renewable and energy efficiency (solar PV, solar thermal, weatherization and lighting efficiency). Graduates will be eligible to sit for a number of tests in these fields, including the NABCEP Entry Level Exam. Courses include the basics of solar PV and advanced applied solar PV, including topics such as safety, system sizing, proper system installation, orientation, performance, maintenance, and troubleshooting. Students receive lectures and hands-on experience installing, troubleshooting, and maintaining solar PV equipment in various types of roofs (trainers), and participate in externships at local worksites in the subsectors of the clear energy industry.</p>
<p>TEXAS, Grand Prairie</p> <p>North Texas Electrical JATC 680 W. Tarrant RD Grand Prairie, TX 75050</p> <p>Contact: Kim L. Allen, Training Director emails: kallen@ntejatc.org Tele. (972) 266-8383 ex. 102</p>	<p>This PV Entry Level Course covers the fundamentals, design and installation of Solar Photovoltaic (PV) Systems. It will include actual hands-on work with photovoltaic systems and equipment along with class you lectures. It is targeted towards Electrical Contractors, Journeyman, Instructors and Apprentices wanting to learn more about the installation and technology of PV systems.</p> <p>Upon completion of the course, students will sit for their NABCEP Entry Level Exam. Students passing the Entry Level Exam will receive a document stating that they have passed the NABCEP PV Entry Level Exam.</p> <p>No experience in PV systems is required; however a good understanding of basic electrical principles is required to complete the course.</p>

<p>TEXAS, Houston</p> <p>Ontility 3403 N Sam Houston W, Suite 300 Houston, TX 77086</p> <p>Contact: John Berry, Director of Training Sales Tele. (512)784-6155 Email: john.berry@ontility.com</p> <p>www.ontility.com</p>	<p>Solar Installer Training – Solar Electric Systems</p> <p>The courses follow the ISPQ standards and NABCEP task analysis including recommended safety procedures, system design, electrical code and industry standard practices. The focus is to provide trainees with real life solar site specific knowledge. Hands-on training covers implementing the task analysis in the field with site analysis, mechanical and electrical design based on specific site conditions, site specific safety issues and construction issues using tools and testing equipment, best practice construction skills and specific site code and inspection issues. The 48 hours of instruction includes 40 hrs of classroom lecture, hand-on labs and hands-on installations and 8 hrs of homestudy.</p>
<p>TEXAS, San Antonio</p> <p>Alamo Colleges 201 W. Sheridan San Antonio, TX 78204-1429</p> <p>Contact: Anson Green, Coordinator Work based Solutions emails: agreen27@alamo.edu Tele. (210) 485-0259</p>	<p>Alamo Colleges: Solar Photovoltaic (PV) Technician- This 48-hour course provides knowledge and skills required to perform basic tasks involved in placement and connection of solar panels. It prepares participants to perform tasks related to configuration, installation, inspection and maintenance of PV systems that meet the performance and reliability needs of the customer. It also prepares them to interpret and comply with applicable codes, standards, and safety requirements. This course prepares participants to take the North American Board of Certified Energy Practitioners (NABCEP) entry level exam for solar technicians. Topics covered in the course include:</p> <ol style="list-style-type: none"> 1. Solar energy overview 2. Electricity basics covering AC and DC 3. Components of PV systems 4. System sizing 5. Electrical and mechanical design 6. Analysis of performance 7. Maintenance and troubleshooting 8. Job specific occupational safety

Students will undergo 40 hours of intensive training, with the intention of gaining knowledge to pass the NABCEP Entry Level Exam. LFCC has directed substantial funding towards the building of a large photovoltaic lab. The lab includes 3 1000watt arrays, one array being battery based, one grid tied and one with micro-inverters. Students will be broken into groups and given the opportunity to assemble all of the components of a photovoltaic system. The classroom portion will be delivered in a power-point format and will include the NABCEP 10 learning objectives.</p>
<p>VIRGINIA, Richmond</p> <p>Community College Workforce Alliance 1651 East Parham Rd. Richmond, VA 23228</p> <p>Contact: Wesley Smith, GATE Director Email: trainer@ccw.vccs.edu Tele: (804) 706-5252 Web: www.ccwatraining.org</p>	<p>Introduction to Solar Photovoltaic (PV) Technology; This class will train participants to design and install grid tied, battery-based, and hybrid PV systems. Students will be given instruction in both classroom and lab setting. Hands-on experience will prepare students for installing systems on their own. Classroom materials will focus on the primary competencies addressed in the NABCEP entry level exam. Upon completion of the class, students will be given the opportunity to sit for the NABCEP entry level exam. Current tax credits are providing an opportunity for local electricians and renewable energy enthusiasts to expand their careers into the solar market.</p>

<p>VIRGINIA, Roanoke</p> <p>Virginia Western Community College PO Box 14007 Roanoke, VA 24038</p> <p>Contact/Instructor: Dan Horine, Program Head, Energy Management Email: dhorine@virginiawestern.edu Tele: (540) 857-6110 Web: www.virginiawestern.edu</p>	<p>Photovoltaic Energy Systems: Teaches techniques for conduct site surveys, installing system components installing inverters and performing system sizing and system maintenance.
