FACILITY/INSTITUTION	PV COURSES	SH COURSES
<p>ALABAMA – Auburn</p> <p>Smart North America 570 Devall Drive Suite 303 Auburn, AL 36832</p> <p>Contact: Ruth Page-Nelson Email: sgna@smartgridnorthamerica.com Tele. (800) 764-3085</p> <p>www.smartgridnorthamerica.com</p>	<p>Solar Photovoltaics</p> <p>This course will provide 40 hours of training covering the NABCEP required learning objectives in preparation for the Entry Level Exam. Participants will get hands-on and classroom training. Completion of this course will result in students who are prepared to enter the field and obtain further training and experience needed to become proficient installers.</p>	<p>The Entry Level Objectives for Solar water heating</p> <p>introduces students to the basics of water heating in homes, commercial buildings, pools, space heating and other applications through capturing the heat from the sun, storing and transferring it for designated applications. This course covers Learning Objectives required by NABCEP:</p> <ol style="list-style-type: none"> 1. Conducting a site analysis , including load analysis 2. Identifying SH safety practices, standards, codes and certification 3. Identifying systems for specific climates and applications 4. Identifying proper orientation and installation methods 5. Identifying proper use of balance of system components and materials 6. Identifying common SH maintenance items <p>The student will be prepared to take the NABCEP Solar Heating Entry Level Exam. Achieving a passing score on the entry level exam is an indication that the candidate has demonstrated a basic knowledge of the fundamental principles of the application, installation, design and operation of Solar Heating Systems.</p>

<p>ALABAMA – Decatur</p> <p>Calhoun State Community College Department of Renewable Energy P.O. Box 2216 Decatur, AL 35609-2216</p> <p>Contact: Jerry W. Adams, Director ACECET/Renewable Energy Email: jadams@calhoun.edu Tele. (256) 306-2642</p> <p>www.calhoun.edu</p>	<p>REN 115</p> <p>This course covers basic principles and design of photovoltaic (PV) systems. Upon completion of the course, students should have demonstrated a basic understanding of PV markets and applications, safety basics, electricity basics, solar energy fundamentals, PV module fundamentals, system components, PV system sizing and electrical and mechanical design, and performance analysis, maintenance and troubleshooting. The course prepares the student to take the NABCEP PV Entry Level Exam. Though highly recommended, taking the exam is not a mandatory requirement of the course.</p>	
<p>ARIZONA – Flagstaff</p> <p>Coconino Community College Community & Corporate Learning 2800 S. Lone Tree Rd. Flagstaff, AZ 86001</p> <p>Contact: Alex Wright Email: alex.wright@coconino.edu Tele. (928) 526-7647</p> <p>www.coconino.edu</p>	<p>Photovoltaic System Installation</p> <p>This course will provide an overview of the basic PV system design and application. The goal is to bridge the understanding of electrical load (from utility bill) and the PV technology with an emphasis on utility-connected residential PV system. Topics for this course: Basic electrical principles, introduction to photovoltaic systems, solar radiation, site survey and preplanning, balance of system, cells, module, array, system sizing, array mounting, utility requirements (net metering), renewable energy tax incentives, safety, tools, and the National Electric Code. In addition, off grid PV system topics include: load analysis, balance of system, charge controllers, batteries, parallel and series wiring, operation and maintenance.</p>

<p>ARIZONA – Mesa</p> <p>Arizona State University College of Technology and Innovation: The Collaboratory 6075 S Williams Campus Loop W Technology Center Room 147 Mesa, AZ 85212</p> <p>Contact: Collaboratory Coordinator Email: Collaboratory@asu.edu Tele. 480-727-1312</p> <p>www.collaboratory.asu.edu/home</p>	<p>Photovoltaic System Design and Installation</p> <p>The 40 hour course will provide an overview of the basic PV system design and application. The goal is to provide an understanding of electrical loads and the ability to offset this with solar power. The emphasis will be on utility-connected residential PV systems along with a basic understanding of off-grid systems. Topics: basic electrical principles applied to PV, intro to PV systems, solar radiation, site survey and pre-planning, utility requirements, safety, specialized tools and the National Electric Code. Additional topics: cells, modules, arrays, system sizing, array construction, balance of system part, load analysis, charge controllers, batteries, selection of proper materials, operation and maintenance. Lab exercises include: electrical & site survey tools, module measurements, effects of temperature and shading, and system commissioning. After-class homework assignments will all students to further practice what was learned in class.</p>	
<p>ARIZONA – Phoenix</p> <p>The Refrigeration School Inc. 4201 East Washington Street Phoenix, AZ 85034</p> <p>Contact: Sherry Jones, Executive Director Email: sherry.jones@rsiaz.edu Tele. This program gives participants a greater understanding of solar technology and the:</p> <ul style="list-style-type: none"> • Safety Basics • Electricity Basics • Solar Energy Fundamentals • PV Module Fundamentals • System Components • PV System Sizing • PV System Electrical Design • PV System Mechanical 	

FACILITY/INSTITUTION	PV COURSES	SH COURSES
	<p>Design</p> <ul style="list-style-type: none"> Performance Analysis and Troubleshooting <p>Fundamentals of Solar (Hands-on) This module provides an overview of photovoltaic (PV) science and an introduction to the fundamentals of solar energy. Through a combination of lecture, problem solving and hands-on lab exercises, students will learn the concepts and processes of photovoltaic systems, including their design and installation. The module covers the scope of solar energy systems conceptual, mechanical and electrical design, with an emphasis on wiring and electrical issues. 100 hours.</p>	
<p>ARIZONA – Prescott</p> <p>Prescott College Environmental Studies 220 Grove Avenue Prescott, AZ 86301</p> <p>Contact: David Hanna, Instructor Email: dhanna@prescott.edu Tele. (928) 350-2224</p> <p>www.prescott.edu</p>	<p>Small-scale Energy Solutions & Photovoltaic System Design: ENV41310</p> <p>This course investigates the role that small-scale energy systems can play in addressing sustainability on the global energy front. An overview of energy sources will be discussed with focus on readily available technologies such as photovoltaic (PV), wind and micro-hydro energy systems. We will compare and contrast the attributes of grid-tied systems and independent, off-grid, energy systems. Students will quantitatively evaluate their personal energy consumption patterns and apply this knowledge to assess conservation strategies. This information will be applied to developing skills in designing a small-scale photovoltaic energy system. Students will develop an understanding of the necessary components of a PV system, installation design strategies, code requirements and currently available state and federal incentive</p>

The course includes the study of PV systems, positioning, electrical and mechanical design and integration (including hands-on experiences), working safely with PV systems, financial topics (system estimate and rebates) and an overview of NABCEP certification requirements.</p>	
<p>CALIFORNIA – Murrieta</p> <p>Ambassador Energy, Inc. 24630 Washington Ave. Suite 102 Murrieta, CA 92562</p> <p>Contact: Steve Fulgham Email: info@ambassadorenergy.com</p> <p>Tele. (866) 586-1840</p> <p>www.mjc.edu</p>	<p>Entry Level Solar PV Design and Installation: This course is an introduction to PV components, system design, industry codes and standards for PV system, and unique design problems and solution. Students learn how PV systems operate as well as basic system design and safety practices. The course covers basic electrical terminology, solar fundamentals, detailed discussion of system components, electrical and mechanical design considerations and OSHA safety standards. This course will prepare students for the NABCEP PV Entry Level Exam.</p>	
<p>CALIFORNIA – Newark</p> <p>Ohlone College 39399 Cherry Street, Newark, CA 94560</p> <p>Contact: Narinder Bansal Email: nbansal@ohlone.edu</p>	<p>ENVS 104 PV Installation and Design is a beginning course in Solar Electricity. Students learn the basics of AC and DC electricity and practice wiring series, parallel, and series-parallel circuits using small solar modules, analogue and digital meters. Students learn the three major types of residential PV</p>	

FACILITY/INSTITUTION	PV COURSES	SH COURSES
<p>Tele. (510) 742-2360</p>	<p>systems—utility interactive, interactive with battery backup, and stand alone. They are given hands-on practice wiring up stand alone systems; they also wire and install a complete 300 volt DC utility interactive system. Students also learn the process of engineering all three types of systems. For their final project students size a residential system, choose components, and produce a three line diagram of their designs. Safety is a major element of this course. Students study and practice proper procedure for wiring up systems that are over 300 volts DC using full-sized solar modules that are wired in strings of up to eight 24 volt modules.</p>

This program is intended for electricians, contractors, utilities and engineers, with an overall goal of developing system knowledgeable professionals to help ensure success of PV installations. The format includes both classroom instruction and student-interactive exercises involving the complete step-by-step process of designing, installing and commissioning PV systems.</p>	
<p>COLORADO - Denver</p> <p>Rocky Mountain Chapter IEC 480 E. 76th Ave., Bldg. 5, Unit A/B Denver, CO 80229</p> <p>Contact: Paul Schmid, Training Director Email: paul@iecrm.org Tele. (303) 853-4886</p> <p>www.iecrm.org</p>	<p>NABCEP Entry Level This innovative course will provide students with a thorough overview of Solar Photovoltaic (PV) technology. Specific subjects that will be covered within the coursework include: PV cells, modules, and system components; electrical circuits; PV system design, estimation, and NEC requirements; solar electric products and applications; an understanding of PV equipment and theory. The course will cover all NABCEP Photovoltaic Entry Level PV Systems Learning Objectives and task analysis. Included within the course will be electrical best practices and recommended safety procedures, system design, NEC, and industry standard practices. The course will also provide hands-on training and will cover safety/fall protection, electrical design, structural mounting systems, mechanical/wind load considerations. The NABCEP Job Task Analysis will be the central focus of all hands-on components of the course.</p>

Our online courses are 6 weeks in length and our in-person workshops, which are 5-6 days in length, are offered all across the country. Check our website for more details. SEI highly recommends that students take PV101 and PV203 before sitting for the Entry Level Exam. SEI students can take the exam at our Paonia, CO facility or through computer-based testing.</p> <p>We also offer five-day intensive lab weeks.</p> <p>Our PV201L Solar Electric Lab Week (Grid-Direct) is designed to follow PV101 or PV203.</p> <p>Our PV201L Solar Electric Lab Week (Battery Based) is designed to follow PV203.</p>	<p>system applications, primarily focusing on grid-direct systems. The goal of the course is to create a fundamental understanding of the core concepts necessary to work with all PV systems, including: system components, site analysis, PV module criteria, mounting solutions, safety and commissioning. The course will also cover the basics of sizing a residential grid-direct system, wire sizing, overcurrent protection, and grounding --all of which will be expanded upon in PV202.</p> <p>PV202 Grid Direct Design and the NEC: This workshop will build upon the core concepts from PV101 and continue to emphasize grid-direct systems. The course will focus significantly on the National Electrical Code (NEC) , including grid interface calculations, grounding considerations, and advanced component specification. Students will learn to evaluate system performance under various operating conditions. Commercial system design elements, such as inter-row shading, inverter selection, and data monitoring solutions will also be covered. This course combines class lectures with individual problem solving exercises covering common design considerations.</p> <p>PV203 Battery-Based Design: This course will build upon the core concepts from PV101, with a specific emphasis on battery-based system design. Students will work through step-by-step; design process for battery-based applications, including stand-alone (off-grid), grid-tied with battery back-up, and hybrid systems. Topics such as load analysis, component selection, battery safety, voltage drop, and commissioning procedures will be presented. In</p>	<p>learn the theory, design considerations and installation strategies necessary to install and maintain a solar domestic hot water system. Passive solar water heaters, drainback systems, antifreeze systems, and photovoltaic powered systems are discussed in depth, as well as an introduction to pool and space heating systems. The workshop will include some hands-on labs and tours of solar hot water systems.</p>

<p>CONNECTICUT, Rocky Hill</p> <p>IEC of New England, Inc. 1800 Salas Deane Highway Rear Building Rocky Hill, CT 06067</p> <p>Contact: Earl Goodell, Training Director. Email: earl@iecne.org Tele. (860) 563-4953</p> <p>www.iecne.org</p>	<p>In this course students will walk through the entire process associated with sales, siting, design and installation of photovoltaic (PV) systems. This will proceed from initial customer interest through to a successfully installed system that will pass electrical and mechanical inspection. Students will learn about the history and applications of solar electricity. They will discover how photovoltaic cells convert sunlight into electricity and learn how to evaluate different products that are on the market. Students will study the technical specifications for the components of a solar electric system and learn how to properly specify components that work together to produce electricity to meet both on and off-grid electric loads. Procedures for the safe, code-compliant installation and maintenance of photovoltaic systems will be explored. At the end of the course students will have the opportunity to sit for the NABCEP PV Entry Level Exam.</p>

The Beginning course is an introduction to photovoltaic systems, design, and procedures commonly practiced in the photovoltaic industry and trade. The course is primarily intended for those with a construction and construction management background who seek to become skilled photovoltaic installers, electricians, or designers. The Advanced Solar Design and Installation course provides detailed instruction in the design and installation of photovoltaic systems with practical, hands-on practice. Those who successfully complete the advanced course will have the knowledge and skill sets required for entry level positions within the renewable energy industry and will be able to converse with solar energy professionals. The final examination for the advanced course is the examination for the North American Board of Certified Energy Practitioners PV Entry Level Exam. Contact Aur Beck at tech@aessolar.com.</p>

It will cover the history of solar electricity, current markets and industry status, basic electrical theory, and other considerations necessary for solar electric systems. Detailed study of system components as well as the proper and safe electrical interconnection of these components will include hands-on training exercises and experiments. Local visits to PV related facilities and assembly of real world systems examples will reinforce classroom learning.</p> <p>* Photovoltaic (Solar Electric) Installation. This course is designed for photovoltaic installers. Students will develop the knowledge and practical skills needed to install utility-connected</p>	<p>Renewable Energy/Energy Efficiency</p> <p>The Program provides students with a comprehensive introduction to renewable energy and energy efficiency. With knowledge and skills needed for entry level employment in the RE/EE field. Provides students already employed in the trades with knowledge & skills relevant to specific RE/EE technologies, as well as broader understanding of the scientific, economic, and political context of the industry; and provides students with the knowledge and skills needed for continued learning in the RE/EE field, including transfer to an AA program and other higher education opportunities.</p>

(608) 221-3321</p> <p>www.wijatc.org</p>	<p>This is a 45-hour comprehensive course covering the entire text of author Jim Dunlop's "Photovoltaic Systems". The curriculum used was developed by the NJATC in conjunction Jim Dunlop and combines a blend of classroom instruction and hands-on activity. Journeyman Electricians are instructed in all facets of PV installations, including solar theory, system design, safety, NEC Code, and troubleshooting. Due to the advanced nature of the course, it is limited to individuals possessing a journeyman electrician's certification, including a minimum of 10,000 hours of electrical construction experience. Upon successful completion of the NABCEP Entry Level Exam, participants will be awarded a Certificate of Completion by the NJATC.</p>	
<p>WISCONSIN, Appleton</p> <p>Fox Valley Technical College 1825 N. Bluemound Drive Appleton, WI 54912</p> <p>Contact: Patrick Jensen, Electrical/PV Instructor</p> <p>Email: jensenp@fvtc.edu</p> <p>Tele. (920) 831-4386</p> <p>www.fvtc.edu</p>	<p>Course description pending</p>	
<p>WISCONSIN, Custer</p> <p>The Midwest Renewable Energy Association (MREA) 7558 Deer Road Custer, WI 54423</p> <p>Contact: Stephen Knudsen stephenk@midwestrenew.org 715-592-6595-106</p>	<p>All three of courses are required and available through the MREA either online or in person.</p> <p>Basic PV (PV 101) - Teaches the basics of solar electric systems including PV system types, system component identification, best application and limitations of each system type, defining the solar window, system loads, and energy efficiency recommendations.</p>	<p>ST 101 – Solar Domestic Hot Water Or STO 101 - Solar Domestic Hot Water Online And ST 301 – Solar Hot Water Installation Lab Students will attend two separate workshops. Students must complete ST 101, either online or in person, and then attend a 3-day Solar Hot</p>

FACILITY/INSTITUTION	PV COURSES	SH COURSES
<p>www.midwestrenew.org</p> <p>ONLINE Options</p>	<p>PV Site Assessment Training (PV 201) - Teaches how to perform a PV site assessment for a home or small business. Covers site assessment tools, load analysis, array placement options, basic system sizing, cost estimates, PV system performance calculators, and incentives.</p> <p>PV System Design (PV 202) - Participants use example site assessments, PV system component design examples, and PV system case studies to learn about selecting equipment, system sizing, layout planning, array siting, and other design considerations.</p> <p>All three training courses are available online or in person.</p>	<p>Water Installation Lab. Students will learn all aspects of site analysis, system design, installation, safety, code, and troubleshooting & maintenance. Total course length is 32 hours. Courses are a mixture of lecture and hands-on.</p>
<p>WISCONSIN, Green Bay</p> <p>Northeast Wisconsin Technical College 2740 W. Mason Street Green Bay, WI 54307 Contact: Amy L. Kox Email: amy.kox@nwtc.edu</p> <p>Tele. (920) 498-6908</p> <p>www.nwtc.edu</p>	<p>Energy-Intro to Solar Electricity is an overview of the use of sunlight to produce electricity and the practical and economic use of PV power systems. Learn the importance of energy efficiency and the economics of PV-generator hybrid designs. (3 credits.)</p> <p>PV-Design & Site Assessment will teach the steps to performing a site audit prior to installation of a PV system. Focus on defining the solar window, system site placement and sizing, load analysis and energy efficiency. (2 credits)</p> <p>Northeast Wisconsin Technical College offers a <i>Renewable Energy Solar Certificate program</i>.</p>	
<p>WISCONSIN, Port Wing</p> <p>Great Northern Solar – Education 77480 Evergreen Rd. Ste.1 Port Wing , WI 54865</p> <p>Contact: Christopher LaForge, ISPQ Certified Independent Master Trainer</p> <p>Email: gosolar@cheqnet.net</p>	<p>Great Northern Solar - Education Division offers three program paths covering the Entry Level Learning Objectives. They include:</p> <ol style="list-style-type: none"> 1) Completion of our standard curriculum - Basic Photovoltaics, Intermediate Photovoltaics, and either Photovoltaic Hands-on Lab or an Advanced Photovoltaic Installation, 2) Independent study with GNS-ED
